REPORT

OF THE

Minister of Education

FOR THE YEAR 1936

TO THE HONOURABLE HERBERT ALEXANDER BRUCE, M.D.,
Colonel in the Royal Army Medical Corps, F.R.C.S. (Eng.),
Lieutenant-Governor of the Province of Ontario.

YOUR HONOUR,—

I beg leave to present to Your Honour the Report of the Department of Education for the year 1936.

The attendance at the Normal Schools for the session of 1936-37 was 1,082, being 155 below that of the session of 1935-36, which totaled 1,237. This decrease is due partly to improving economic conditions, partly to the realization that the profession is already overcrowded, and partly to the fact that the requirements for admission have been raised. While the quantity has diminished, the quality, as measured by mental ability, has improved. The only Normal School showing an increase in attendance for the year was that of the University of Ottawa. This school has been responsible, within the last ten years, for increasing the percentage of First and Second Class teachers in the schools attended by French-speaking pupils from 13 per cent. to 75 per cent. Its standards are fully equal to those of the other Normal Schools, and so excellent is the command of English possessed by its students that it is difficult to distinguish the class-room work in this subject from that of the other training schools.

There has been a general improvement in the qualifications of teachers throughout the Province. Large numbers of those possessing Second Class standing are undertaking through private study and through attendance at the summer courses offered by the Department to become possessors of First Class Interim certificates, while those with First Class Interim certificates are proceeding by similar means with the first year's University work necessary for the completion of their permanent standing. It is a tribute to the ambition, industry, and enthusiasm of such teachers that over 5,000 attended Departmental summer courses in 1936 and that at least an equal number attended courses given by the Universities. This means that about half of the teachers in the Province used part of their vacation to improve their academic standing.

Up to the present year the "single lesson" plan for practice teaching was in operation. One lesson a week was taught and, towards the end of the session, every student was given a continuous half-day's practice. This method was good training in the technique of teaching but was weak in that it failed to train the prospective teacher for teaching a series of lessons or to become acquainted with real problems in administration and with practical direction of activities.

The plan adopted for the session of 1936-37 is to have the student teach six or eight single lessons to familiarize him with the main principles of teaching and to afford an opportunity for obtaining some control in technique. The student body of each school is divided into four sections and after the preliminary practice mentioned above each section in succession is sent for a week at a time and in groups of two or three to the practice schools. Here the first day is spent in observation. On the second the student teaches at least one lesson and each succeeding day the number of lessons is increased until finally each student is given complete charge of the room for a whole half-day. The section then returns to the Normal school for three weeks while the other three sections, in succession, go into the practice schools. This routine is continued till the end of the school year. The practice teaching includes discussions on the lessons taught with the critic teacher in charge of the room. To avoid undue strain on critic teachers practice teaching in any given room is confined to alternate weeks. The change is proving satisfactory as it provides for better practical training under less artificial conditions than those prevailing under the former plan. The student, moreover, is given an opportunity of acquiring some skill in continuous work.

For some years it has been the practice of the Department to pass on the recommendation of the Normal School staffs students who have made at least 60 per cent. on sessional tests while those who failed to attain this standing were required to write on final examinations set by the Department and read by the staffs. Under the new scheme adopted for the session of 1936-37 such students will still write on the final Departmental examinations but the papers will be read by committees of Normal School teachers on a plan somewhat similar to that employed in Departmental High School examinations. It is hoped in this way to ensure greater uniformity of standards.

Administration of City Schools

In the administration of schools in urban centres there appears to be a tendency to place all schools, both elementary and secondary, under the control of one head. In 1925, London made the senior Public School Inspector responsible, not only for his own regular work, but also for the supervision of the purchases of all supplies both for the elementary and the secondary schools of the city. It was decided furthermore to have all reports presented to the Board through this official. The plan was successful from the beginning and the Department gave its approval to the arrangement. In 1931, Chatham adopted the London plan with some minor variations. Later, other urban Boards discussed with the officials of the Department the feasibility of placing all supervisory powers in the hands of one official. Accordingly, in 1932, a regulation was passed by Order-in-Council permitting the Board of Education in any city having a population of 100,000 or more to appoint a Superintendent of Schools. This official must be acceptable to the Advisory Vocational Committee and both his experience and academic and professional qualifications must be satisfactory to the Minister. The Superintendent thus appointed may exercise any powers assigned to him by the Board of Education and the Vocational

Advisory Committee, and approved by the Minister, provided that these powers are not inconsistent with the Statutes and Regulations of Public Schools, High Schools and Collegiate Institutes, and Vocational Schools.

In July, 1932, the City of Hamilton took advantage of the regulation and appointed a Superintendent of Schools, and in November of the same year Toronto followed suit. In 1935, the City of London asked that the regulation be modified to include cities with a population *below* 100,000. The regulation was amended to meet this request and in October, 1935, the London Board appointed the senior Public School Inspector as Superintendent. Shortly after this both Windsor and Chatham took advantage of the amended regulation and appointed Superintendents. In all the cities mentioned above the scheme has proved satisfactory.

During the year a number of rural school buildings have been erected, some to replace schools destroyed by fire, and others to replace buildings which time and changing conditions had rendered unsuitable for present-day use. The new buildings are modern, with standard class-rooms, good lighting (in many cases with artificial lighting), single desks, slate blackboards, separate cloak-rooms, inside toilets, and good heating plants. They are built of brick with cement foundations, are attractive in appearance, and are a credit to the trustees and ratepayers who have planned them and paid for their construction.

Especially worthy of mention is the school built in S.S. No. 1 Canboro, on the Provincial Highway three miles east of Dunnville. In addition to the features already mentioned this school contains at the rear of the class-room a closed stage with folding doors. Ordinarily this enclosed space can be used for library purposes and as a teacher's room. On special occasions and community gatherings the doors may be thrown open and the whole floor space is thus made available.

Another building which suits its purpose admirably is that built by the Kemptville Board. This houses both the elementary and the secondary school departments. There are separate entrances and corridors for each department and separate playgrounds, in addition to ample space for school gardens. Both auditorium and gymnasium are readily accessible to the pupils of either school. Further details of this building will be found in the Report of the Chief Inspector for Public and Separate Schools.

Health of Teachers

Some years ago the Teachers' and Inspectors' Superannuation Committee brought to the attention of the Department the somewhat alarming fact that an unduly large number of teachers were being granted pensions on the basis of disability. The number of these was much greater than the actuarial calculations had provided for and the situation constituted a possible threat to the future solvency of the fund. In September, 1935, it was therefore announced that all candidates for admission to the College of Education and the Normal Schools would in future be required to undergo a medical examination by doctors appointed by the Department. As a result, in 1936, twenty-nine candidates out of a total of 1374 were rejected on medical grounds. It is hoped that the average teaching efficiency of the staffs will be raised by the elimination of those who do not give promise of retaining good health throughout the normal period of expectancy. At present, illness among teachers is responsible for a very serious loss of time, not to speak of the lowered efficiency of those who remain on duty while handicapped by poor health.

Text-Books

During the year 1936 the new Treasury Readers, Books Five and Six, were authorized to replace the former Third Reader. These books were introduced into the schools in September. Plans are already under way for the introduction of two more Readers to replace the present Fourth Reader in September, 1937.

The Third and Fourth Readers have been in use for some ten or twelve years. During this time a good deal of research work has been done in the subject of reading and the old Readers were becoming more or less antiquated as compared with the type of modern books now available. Then, too, each of the old Readers contained what was supposed to be a sufficient amount of reading material for the two years the pupil would normally spend in the Form. The result, generally speaking, was that the pupils read, privately, all the selections in the Reader during the first year, and the second year's work in this subject was therefore monotonous and uninteresting to the pupils and consequently was pedagogically unsound. Modern methods demand a new book for each year's work. The challenge was met by the authorization of the Treasury Readers. A much more interesting and more suitable selection of reading matter was thus provided and the pupil will now have more reading material in one year than was formerly available in the Third Reader for two years. It was also felt that, since the amount of the reading material in the former books was limited, too much intensive teaching was done and that, in consequence, reading for pleasure and interest was somewhat neglected. The amount of reading material in the new books precludes the possibility of teaching all the selections intensively and the teacher is encouraged to make them the inspirational source of wider supplementary reading. Direction for such additional reading is furnished through the inclusion of lists of suitable books at the end of each topical section into which the books are divided.

In addition to the new Readers, the Spelling Book was replaced by two new books, Canadian Speller, Books One and Two. The old Spelling Book had been in use since 1925, and it was probably the best book available in the subject at the time of its authorization. But, as in the case of reading, a great deal of study has since been given to the subject of spelling and the new Spellers embody the results of the best research work available up to the present time.

The present Public School Arithmetic has been in use since 1925. It covers the whole Public School course in the subject and the amount of material for the individual grade is therefore limited. This applies particularly to the work for the junior classes. Modern methods call for a separate text-book for each grade and for problems more closely connected with the community life of the pupil. It has therefore become imperative for the Department to take advantage of the existence of newer books now available if Ontario is to keep pace with the educational progress in other states and provinces. Accordingly plans are already under way for the introduction of two new junior text-books which, it is hoped, will be ready for the opening of schools in September, 1937. The new books will be for the use of Grades III and IV (Junior and Senior Second classes), one book for each grade.

Respectfully submitted,

L. J. SIMPSON,

Minister of Education

December 1, 1937

APPENDIX A

REPORT OF THE CHIEF INSPECTOR OF PUBLIC AND SEPARATE SCHOOLS

The Provincial Inspectoral Staff, 1936

I. IN MEMORIAM:

On August 12th, 1936, Mr. J. E. Benson, M.A., Public School Inspector for the City of Windsor died at his summer home in Wellington, Prince Edward County. He was in his 63rd year. Mr. Benson first began his duties as a Public School Inspector in Prince Edward County, his home area, on January 1st, 1913, and from that time to January 31st, 1920, he was instrumental in bringing about many improvements in the county schools, one of the chief of these being the organization of the Wellington Consolidated School. In Windsor, Walkerville, and Sandwich, and for the past year in the new City of Windsor, including East Windsor as well as the urban centres mentioned above, Mr. Benson gave outstanding service as an educational leader. The organization of the Rotary Schools of the Border Cities and the splendid special subject departments of these schools will stand out as one of his chief contributions to the advancement of the elementary schools in the Province. Mr. Benson possessed in a high degree those qualities required in a city superintendent of schools and by an educational leader, and the City of Windsor, as well as the Province at large, has lost through his death a leader in elementary school education. Mr. Benson received his early education in Prince Edward County and after some experience as a teacher he entered Queen's University, graduating in 1911 with honour specialist standing in Science.

II. RESIGNATIONS:

On March 31st, 1936, Mr. W. A. Wilson, B.A., retired as Public School Inspector for the cities of Port Arthur and Fort William. During his period of office in this area, beginning January 1st, 1925, he had been successful in introducing many progressive measures into the schools and at the conclusion of his service, due largely to his efforts, one of the cities had the highest percentage of First Class certificated teachers among the cities of the Province. Mr. Wilson gave strong leadership to his boards and teaching staffs and secured a very high degree of co-operation and initiative on the part of all his associates. The elementary schools of Port Arthur and Fort William made rapid progress under his supervision. In his earlier teaching experience he taught or acted as principal in the Gananoque, Kenora, and Haileybury High Schools. He was also Public School Inspector for the districts of Temiskaming and Cochrane from July 1st, 1919, to December 31st, 1924, and gave invaluable assistance to the Department in the early organization of pioneer school sections in these areas. Mr. Wilson graduated in Arts from Queen's University in 1897 and received his professional training at the Ontario Normal College in 1898.

Mr. W. R. Liddy, B.A., retired as Public School Inspector for Dufferin County, in part, and Peel County, in part, on August 31st, 1936. He received his public school education in his native township and his secondary education in the Orangeville High School. He began his educational career at 18 years of age

in School Section No. 2 Mono, subsequently teaching in School Section No. 6 Amaranth and in the Shelburne Public School. As a High School teacher he joined the staff of the Port Dover High School and after serving on it for two years was appointed principal, a position he held and filled most acceptably for thirteen years, resigning it to become Public School Inspector for Dufferin County on January 18th, 1912. As an Inspector, Mr. Liddy gave most creditable service. He was always alive to the interests of the schools in his inspectorate, winning the confidence and support of the boards of trustees by his tact, his fair-mindedness, his enthusiasm, and the keen interest which he at all times had in the schools. In the class-room he was an inspiration to the teachers and the pupils. To new educational movements he gave his whole-hearted support and co-operated splendidly with the Department of Education.

Mr. Chas. F. Ewers, B.A., Public School Inspector, Rainy River District, retired from his duties on August 31st, 1936. He had received his inspectoral appointment on September 1st, 1925, and gave eleven years of very successful service to the Department and to the people of his area. His inspectorate called for much tact in dealing with problems of school organization, school finance, and the erection of school buildings, and his fairness and good judgment led to the prompt and satisfactory adjustment of these problems. In the class-room Mr. Ewers was equally successful in assisting teachers to improve their methods. He received his early education in Port Perry, and graduated from the Toronto Normal School in 1891. In 1911 he received his Arts degree from Queen's University. His public school teaching experience took place at Kleinburg, Orangeville, and Bolton. He taught in continuation schools at Bolton and Lucknow and subsequently had experience as a high school teacher or principal at Caledonia, Bradford, Aurora, and Fort Frances.

Mr. J. C. Spence, B.A., B.Paed., resigned as Public School Inspector for Carleton County (West) and Lanark County (East) on December 31st, 1936. He had been appointed to this position in 1923. Mr. Spence was born at Glenarm in Victoria County and received his early elementary and secondary education in the home area and at Lindsay, Peterborough, and Collingwood. After completing the Normal School course in 1889 at Ottawa he received an appointment on the Ottawa public school staff, where he gave outstanding service as a teacher and principal until his appointment as an Inspector in 1923. During his teaching experience, Mr. Spence was a constant student and obtained through private study and summer courses his Arts degree with specialist standing in modern languages, his Bachelor of Pedagogy degree, and four other special certificates. Mr. Spence was unstinting in his services to the public schools both in the City of Ottawa and in his inspectorate and marked advancement was made in the schools under his supervision during his tenure of office as an Inspector.

Dr. Field is a native of Lincoln County, his birth-place being in the township of Grimsby. He began teaching when only seventeen years of age and continued in this important work until 1893, when he entered the University of Toronto and pursued an Honour Course in English and Modern Languages. On graduation in 1896 he was appointed to the staff of the Walkerton High School. In 1900 he accepted a position in the Goderich Collegiate Institute, serving under the late Dr. Hugh Innis Strang, whom he succeeded as Principal in 1906. Dr. Field was appointed Public School Inspector for the district of East Huron in February, 1911. He obtained the degree of Doctor of Philosophy in 1912. Subsequent to his appointment as Inspector he was offered a position on the staff of the Stratford Normal School, but he declined to accept it.

Dr. Field was a person of fine attainments and sane judgment, combined with a mildness of manner and heart and a sense of fair play. He was a most interesting and effective teacher, and a very successful principal. As an Inspector it may be truly said that he left the schools of his Inspectorate better than he found them. He laboured faithfully and well. The children of the schools which he served, the boards whom he advised, and the teachers whom he inspected know him as one who was always a gentleman and at all times interested in the progress of education in his Inspectorate, as well as elsewhere, and ever willing to do his best for its cause. Dr. Field retired on December 31st, 1936.

III. APPOINTMENTS:

The following appointments were made to the provincial staff of Inspectors during 1936:—

Mr. Wm. Edgar Eade, B.A., B.Paed., principal of Francis Public School, Fort William, to District Division II (Rainy River), to succeed Mr. Chas. F. Ewers, B.A. His duties began on September 1st, 1936, with residence at Fort Frances.

Mr. Wm. J. Judd, B.A., principal of St. James Public School, Port Arthur, to District Division III (Thunder Bay, in part, and the City of Port Arthur), to succeed Mr. W. A. Wilson, B.A. His duties began on September 1st, 1936, with residence at Port Arthur.

Mr. Geo. A. Campbell, B.A., Principal of the Kennedy Collegiate Institute, Windsor, was appointed by the Windsor Board of Education on November 4th, 1936, as Superintendent of Schools for the city and on the same date Mr. A. R. Davidson, B.A., Principal of King George School, Windsor, was appointed by the board as Public School Inspector. They succeeded the late Mr. J. E. Benson, M.A.

IV. TRANSFERS:

Mr. H. E. Elborn, M.A., was transferred from District Division XI (Temiskaming, in part, and the towns of Englehart, Iroquois Falls, Matheson and Kirkland Lake) to Waterloo County (No. 1), to begin duties on September 1st, 1937, with residence in Kitchener.

Superintendents of Schools in Cities

Beginning on January 1st, 1925, the Board of Education of the City of London gave to the Senior Public School Inspector, in addition to his duties relating to the Public Schools, the administration of the central offices of the Board of Education and made him responsible also for the supervision of all purchasing in behalf of both Public and Secondary schools. He was further required to prepare and bring all school reports before the Board and its committees for consideration. The plan worked successfully from the beginning and the Department of Education gave approval of the additional duties given to the Inspector. In 1931, the City of Chatham adopted the London plan with minor variations.

From time to time different urban centres have discussed with the Department the need for one official who would be given general supervisory powers over both elementary and secondary schools in each urban centre and become the chief advisory official to the Board of Education. Accordingly, the following regulation was passed by Order-in-Council in 1932:—"The Board of Education

of a city having a population of 100,000 or more may appoint a Superintendent of Schools who shall be acceptable to the Advisory Vocational Committee and whose academic and professional qualifications and experience in the schools of the Ontario Provincial system are satisfactory to the Minister of Education. The Superintendent so appointed may exercise any duties assigned by the Board and the Advisory Vocational Committee, and approved by the Minister, which are not inconsistent with the Statutes and Regulations of the Public Schools, High Schools and Collegiate Institutes, and Vocational Schools”.

In July, 1932, the City of Hamilton was first to take advantage of this regulation. Mr. F. E. Perney, B.A., B.Paed., Chief Inspector of Public Schools, was appointed to the position of Superintendent of Schools for the city.

The City of Toronto, on November 17th, 1932, appointed Dr. C. C. Goldring, M.A., as Superintendent of Schools.

In 1935, the City of London asked that the regulation be modified so that cities with a population below 100,000 might appoint a Superintendent of Schools. The regulation was amended to meet this request and on October 10th, 1935, the London Board of Education named Mr. G. A. Wheable, B.A., as Superintendent.

On November 4th, 1936, the City of Windsor appointed Mr. G. S. Campbell, B.A., Principal of the Kennedy Collegiate Institute, as Superintendent of Schools for the city.

On December 29th, 1936, Mr. H. A. Tanser, B.A., B.Paed., was appointed Superintendent of Schools by the Chatham Board of Education.

In all the cities mentioned above the new plan has worked out successfully and it appears probable that other cities of the Province will adopt this plan in the near future.

Additional Duties to Some Inspectors

With the object of keeping expenditures within the limits of the money voted by the legislature, it was necessary during the year 1936, to ask some of the Inspectors to share the duties in contiguous inspectorates where the regular appointees had retired or had been transferred.

Mr. W. F. Hiscocks of Monteith and Mr. J. M. Kaine of Haileybury have assumed between them, since September 1st, 1936, the duties of Mr. Elborn's former inspectorate in the Kirkland Lake area, and it will be necessary for them to continue under this arrangement until August 31st, 1937.

Mr. W. F. Smith of Collingwood, Mr. M. R. Fydell of Brampton, and Mr. W. H. Carlton of Bradford have assumed the duties of Mr. Liddy's inspectorate (Dufferin County) since September 1st, 1936, and this arrangement will continue until August 31st, 1937.

For the school year, 1935-1936, Mr. J. H. Smith of Stratford and Mr. Lambert Norman of Galt undertook, between them, the supervision of Mr. R. H. Roberts' inspectorate, Waterloo County, No. 1.

In the Elgin and Kent County areas, Mr. J. C. Smith of St. Thomas, Mr. A. B. Lucas, Chatham, and Mr. G. A. Pearson, Chatham, continued to carry the additional duties of a fourth inspectorate.

In all these cases the Inspectors co-operated most willingly with the Department of Education in meeting these additional demands and the services rendered were much appreciated.

Correspondence Courses

The Correspondence Courses conducted by the Department of Education were begun in 1926 with an enrolment of 50. They have therefore been in operation for 11 years and the enrolment is now over 2,000. Those eligible for admission to these courses are:—

- (1) Those out of reach of a school throughout the whole year.
- (2) Those who are unable to attend school for the winter months because of impassable roads, or the closing of the school. These attend school for part of the school year and take the Correspondence Courses during the months in which they are unable to attend their own schools.
- (3) Those who live within reach of a school but who are physically unable to attend. Such pupils are found here and there in all parts of Ontario, some living in rural sections and some in urban centres. There are about 100 such pupils enrolled at present.
- (4) Those long-time patients in sanatoriums who desire to have the lessons. In these cases the lessons are sent out but the answers are not returned for correction.
- (5) Other cases determined on their merits.

The plan on which these courses are conducted is as follows: Two lesson assignments (each of which means five days' work) are sent out on regular dates three times each month. All the necessary school books, supplies, answer sheets, and stamped, addressed envelopes for the return of the answers are provided free by the Department of Education. When the answers are returned, they are examined by a staff of fully qualified and experienced teachers in the Department, who correct them and make such suggestions and explanations as they find necessary. The Department also sends at Easter and Christmas each year supplementary readers to all those enrolled who are far enough advanced to read a book and to the others an Easter or Christmas card. That these courses are proving highly satisfactory may be judged by the hundreds of letters of appreciation received from those making use of them. As the lessons are based on the authorized text-books in use in the schools and on the courses of study prescribed for these schools, a pupil may change from day school to the Correspondence Courses, or vice versa, at any time without detriment.

These courses have recently been extended to include fifth class or lower school work (Grades IX and X); so that it is now possible for a child in any part of the Province, no matter how isolated, to obtain a complete public school or lower school education. Ninety pupils have already passed the High School Entrance examination through these courses. The fact that each teacher on the staff has charge of from 50 to 350 pupils, depending upon the grade, makes this by far the least expensive form of education in the Province. The cost per pupil, including expenditures of all kinds, is about one-seventh of the average cost per pupil in the rural schools of the Province.

The School Cars

This itinerant school, which brings education to the homes of isolated children in the north, has just completed its tenth year. It has changed life in these sequestered communities, and brought hope to scores of youth where nothing but blank ignorance and defeat had faced them in the struggle of life.

A recent report from one car shows where their after-school life has found them. Some have joined their fathers in the work of hunting, fishing, trapping, and bushranging on the frontier lines, but with a new interest and a happier outlook on life; others hold responsible posts in the mining fields or railway service; others are forging ahead in advanced schools, one, for example, completing his course for teaching in the University of Ottawa Normal School; and others again are pursuing study courses in commercial art, radio, and mechanical engineering. All are proving their capacity for self-dependent effort and achievement born of the self-help system peculiar to the school car. The thousand miles covered by the six cars are only a fraction of the wide areas in the north calling for help, but financial limitations forbid extension for the present. The idea has spread to other lands. The Imperial Commission governing Newfoundland, after enquiry into the organization and mode of operation of Railway School Cars in Ontario, has adopted the plan in that colony, and finds it a happy solution for its problems in territory similar to that in Northern Ontario.

Exchange of Teachers

There are 44 Ontario teachers on exchange for the school year, 1936-1937. This is the same number as that of last year, and with that exception the largest number in any one year for some time. Of these, thirty-seven are from Public Schools, three from Separate Schools, one from a Normal School, and three from Secondary Schools. None will dispute the educational value to the teacher of a year spent in service under systems different from those in our own Province. The exchange teachers have studied for themselves the conditions of other countries or provinces and their own land takes on a new significance as a part of the British Commonwealth of Nations.

To show that these exchanges are not confined to any one part of the Province it may be stated that the Ontario teachers at present on exchange are from York County, St. Thomas, Windsor, Beeton, Toronto (16), Perth, Oshawa, Keewatin, Niagara Falls, Brantford, St. Catharines, Ottawa, Eganville, Chatham, London, Hamilton, Schumacher, North Bay, Stoney Creek, Lucan, and Picton.

Summer Courses, 1936

The number attending these courses in 1936 was greatly increased, due largely to the new course in Education. The successful completion of this new course is now one of the requirements for a Permanent First Class certificate. Many of the teachers who attended this Course have expressed themselves as highly appreciative of its value; and there is no doubt that it will prove to be more and more valuable to those teachers who have had from two to four years of teaching experience. The numbers taking the Courses in Agriculture and Music were also much larger in 1936, due in a large measure to the active efforts of Mr. Davies, the Inspector of Agricultural Classes, and of the Provincial Supervisor of Music, Mr. Fenwick. The following is a statement of the enrolment by subjects:—

Agriculture.....	1,121
Art.....	292
Auxiliary Classes.....	134
Commercial.....	216
Education.....	668
English-French.....	253
Farm Mechanics.....	25

Health Teaching.....	176
High School Assistants.....	51
Kindergarten-Primary.....	279
Manual Training.....	102
Music (a) Vocal.....	542
(b) Instrumental.....	11
Oral French.....	46
Physical Education.....	252
Upper School.....	637
Vocational Courses.....	70
Vocational Guidance.....	6
Total.....	5,039

New School Buildings

During the year, a number of new school buildings were erected in the rural areas. A few of these were to replace schools which had been destroyed by fire, others to replace those which time and changing conditions had rendered unsuitable. These new buildings are modern, with standard class-rooms and splendid lighting (some have artificial lighting as well) with single desks, slate blackboards, separate cloakrooms, inside toilets, basements, and good heating plants. Most of them have been constructed of brick and cement and present an attractive appearance. The boards of trustees and the ratepayers concerned are to be congratulated on their fine new schools. Special mention may be made of the new rural school building in Public School Section No. 1 Canboro, situated on Provincial Highway No. 3, about three miles west of Dunnville. This school is of fine architectural design and has all the modern improvements. The most unique feature is a closed stage with folding doors at the rear of the classroom, which can be used as a library room or a teacher's room and serves a most useful purpose on special occasions for the pupils and for the people of the community.

An exceptionally fine school building was also erected in the town of Kemptville. The building is of fire-proof construction throughout and contains both the Public and the High School. There are separate entrances for these schools, also separate corridors, separate lavatories, separate playgrounds, and separate school gardens. The pupils can reach the gymnasium and the auditorium conveniently from either school. The foundation is of solid concrete. The walls above it are of brick with stone trimmings. All floors and roofs are of concrete slab on steel joists, and are insulated against winter cold as well as the heat of summer. The lighting, natural and artificial, of all the rooms is modern in character and excellent in quality. Mechanical controls maintain a uniform temperature throughout the class-rooms. The Public School has five class-rooms, four of which are of standard size, each with a cloakroom in the rear. The fifth class-room has a larger floor space than that of the others. The primary room is adequately equipped for kindergarten-primary work. Besides the regular class-rooms, the gymnasium, and the auditorium, there are three special rooms,—the general science laboratory, the household science room, and the general shop. The girls of the fourth classes are given courses in household science and the boys of the same classes receive instruction in shop work. Agriculture and music also receive special attention. The people of Kemptville have every reason to be proud of their fine new school. It was officially opened by Dr. McArthur, the Deputy Minister of Education, on January 4th, 1937.

The Medical Examination of Candidates Applying for Admission to the Normal Schools

Some years ago the Teachers' and Inspectors' Superannuation Commission brought to the attention of the Department of Education the fact that a large number of teachers were being compelled to apply for pensions on the disability basis. This number has been and continues to be greatly in excess of the number estimated by the actuary when formulating the conditions under which the pension scheme would operate. On November 1st, 1936, out of 1,601 teachers receiving superannuation allowances under the Act, some 622 (498 women and 124 men) had been granted their pensions under the disability clauses of the Superannuation Act. In other words, 38.8 per cent of the teachers retiring on pension were required to do so because of physical disability. In September, 1935, the Minister of Education announced by regulation that all candidates for admission to the Normal Schools and the College of Education would be required to undergo a medical examination by physicians appointed by him. The result was that twenty-three student teachers were not permitted to complete their teacher-training courses. In September, 1936, the number was twenty-nine out of a total of 1,374 candidates. There is no doubt that this practice will have a tendency to raise the efficiency of the provincial teaching staff through the elimination of those who do not give promise of good health over a normal teaching period. It is deemed essential also that teachers-in-service should give greater attention to the laws of health. If it were possible to make an accurate survey of the time lost by teachers due to absence on account of illness and also of the loss due to inefficiency because of poor health while on duty, there is no doubt such a survey would show that there is a very great lowering of teaching efficiency throughout the Province due to the effects of poor health among teachers.

School Health Supervision

During the past few years medical and dental services have not been extended to new areas as fast as might be desired. It is known that in many locations the people, and particularly the mothers, are desirous that this type of service should be given but it seems difficult to effect an organization since it becomes necessary for the rural school sections to secure this service through the local municipal Board of Health.

In Wentworth County a splendid system of medical and dental inspection of schools has been worked out, and through Dr. Holbrook and his committee the boards of trustees have been able to obtain the service at cost. By means of periodic meetings, the weaknesses of the service are constantly being corrected and frequent reports of the school nurses to the committee also result in a constantly improving service.

The individual school sections are made to feel that they are important links in the chain and the different boards send representatives to the periodic meetings of the committee. The result is a high degree of interest and co-operation among the members of the committee, the staff of nurses, the trustees, and the parents.

It is hoped that in the near future there may be an extension of this type of school medical and dental inspection on a county basis and somewhat similar to the plan now in operation in Wentworth County.

Rural School Fairs, 1936

Every county in old Ontario and every district in northern Ontario conducted Rural School Fairs in 1936. All told, 522 School Fairs were held, in which 111,910 pupils of rural Public and Separate Schools took part. The total number of entries made by these pupils was 348,276.

Rural School Fairs are a joint educational effort supported by the Departments of Education and Agriculture. They are designed for farm boys and girls with the object of giving practical application to the lessons in agriculture taught in the schools. Each pupil is supplied with one package of grain, root, or vegetable seed, and one package of flower seed for planting on the home farm. This seed is paid for by the Department of Education and distributed to the schools by the Agricultural Representatives of the Department of Agriculture.

The Agricultural Representative, in co-operation with the Public School Inspectors and teachers, drafts a prize list suited to the agricultural possibilities of the community. The Inspectors undertake the judging of exhibits and competitions dealing with school work, while the Agricultural Representative supervises the judging of the agricultural products and classes, and assumes the management of the Fair. Teachers, trustees, and parents all co-operate in making the Fair a community enterprise.

Provision is made in the prize list for boys and girls to exhibit the produce of the seed supplied in the spring, and classes are also included for live stock (calves, colts, and lambs) poultry, and fruit. Exhibits of art, writing, manual training, nature study collections, sewing, and cooking are evidence of their diligence both at school and at home.

An active programme is planned for School Fair Day, and pupils enter heartily into such competitions as judging live stock, fruit and vegetable naming, button-hole making, patching a grain bag, darning socks, identification of weeds, poultry culling, public speaking, recitations, music, Strathcona exercises, and sports. After the judging of exhibits is completed, the judges give reasons for their placings and explain the proper methods of selecting and preparing exhibits.

Visual Education

There is no disputing the fact that we are living in an age of appeal through the eye. Illustrated magazines, advertising and pictorial sections of newspapers, comic strips, travelogues, and the cinema all bear proof of the fact; and both art and science are lending their support to the development of colour photography, telephotography, and television.

Methods in education are falling in line, but with that conservatism which has always marked progress in things educational. The Department of Education has allied itself with this movement by taking over from the Ontario Government Moving Picture Bureau that portion of its relinquished material adapted to school use. One hundred and forty sets of lantern slides furnish the nucleus of a growing contribution to class-room studies in history, geography, travel, nature study, science, and industry. This material, for some time unused and unorganized, is being re-conditioned and put into shape for efficient service. The hand of the teacher who is skilled in adaptation and tactful in the use of time and method will be greatly strengthened, and she will make school, not only a more attractive place for the pupil, but an institution where the eye will aid the ear, the hand, and the voice in their service to education.

The New Courses of Study

For some years there has been a demand for a revision of the Courses of Study for the Public and Separate Schools in Ontario. Early in 1936 the Minister of Education appointed a number of committees to draft courses for Grades VII-X (Forms IV and V, junior and senior grades, in the present organization). It seemed necessary that these courses should be completed before the others in order to present what might be deemed satisfactory completing courses for those who would discontinue attendance at day school at or about sixteen years of age.

At midsummer 1936 these courses were typed in tentative form; but it was decided not to place them in use until further progress should be made, on the one hand with the courses for Grades I to VI, and on the other hand with those for Grades XI-XIII. Consequently in the early fall of 1936 committees were appointed and began work on these two divisions.

At the closing of the year 1936 the committee working on the courses for Grades I to VI had laid its plans. In accordance with these plans leading teachers in the elementary schools, members of the normal school staffs, and inspectors will be consulted, and the recent courses for elementary schools authorized by other provinces, states, and countries will be reviewed. It is also quite probable that the new Ontario courses will be issued in tentative form at midsummer 1937. The teachers and inspectors will be called upon to give the proposed courses a thorough trial and at the end of the school year, in June, 1938, to submit their comments on and criticisms of the courses to the Department. After further revision it may then be possible to give the courses full authorization in September, 1938.

A new feature of the revised courses will be the change from the former classification of Forms I-V to the newer one of Grades I-X. It has long been felt that the traditional classification of the Ontario Courses of Study for Public and Separate (elementary) schools made it difficult, among other things, to compare the school statistical tables of our Province with those of other systems.

It is too early to comment fully on the changes which will be shown in the new courses, but improvements are expected along the following lines:—

- (1) Greater attention to the English subjects.
- (2) Less number work in the primary grade and a more practical course in arithmetic throughout the grades.
- (3) Greater emphasis on health teaching.
- (4) Closer correlation as among civics, history, and other social studies.
- (5) More suitable completing courses for those who will leave school at the end of Grade IX or Grade X.
- (6) More detailed outlines of the work to be covered in each subject or group of subjects in each grade.
- (7) A grouping together of like subjects.

New Text-Books

In September, 1936, the Department introduced two new authorized readers for Grades V and VI (Form III) to take the place of the former Third Reader. At the same time decision was made to introduce two further new readers in September, 1937, to replace the present Fourth Reader. The number of passages and the amount of reading in these books will be more than double the content

of the two books replaced and the selections are more in keeping with the interests of the pupils concerned. The chief object in these changes is to encourage more extensive reading by the pupils and to discourage the intensive analysis of every lesson by the teacher. It is realized that if pupils are to read for enjoyment and appreciation and if they are to leave the elementary schools with a broad foundation of general reading they must be encouraged to do more reading from books which will appeal to them, as well as lead them afield to the school library, the public library, and to the choice of good books and good reading in later life. The books chosen for Grades V and VI were the Canadian Treasury Readers for these grades, published jointly by the Macmillan Company and the Ryerson Press. The books to be introduced in September, 1937, are from the Canadian Life and Literature Series for Grades VII and VIII, published jointly by Thos. Nelson and Sons and The Educational Book Company, Limited.

Two new Spelling books, one for the junior grades and one for the senior grades, were also introduced in September, 1936, to replace the single book formerly in use. The new books were those prepared by Dr. F. Quance, Dean of the College of Education at Saskatoon, and are published by the W. J. Gage Company, Limited. These new Spellers are the result of a scientific study of the subject of Spelling in Canadian Schools by Dr. Quance. The grading of the words and the assignments for each grade will make these books of great value to the teachers in improving the spelling of the pupils.

The Penny Bank

Thrift education is given in 499 schools of the Province by means of the Penny Bank of Ontario, an increase of eleven schools over 1935. The children in these schools now have on deposit \$1,272,209, being an increase of more than \$17,000 over a year ago.

Opportunity is given the pupils once a week to make deposits. Regularity in depositing rather than the amount of the deposit is stressed. It is noteworthy that at the end of the year 41 schools had 80 per cent. or more of their pupils making deposits each banking day in the month.

In addition to the opportunity to save regularly, the Penny Bank furnishes the schools with thrift lessons, in which wise spending is taught as the necessary complement to regular savings. That the children save for a purpose, and then spend to achieve their purpose is evident from the fact that although the deposits for the year totalled approximately \$700,000 all but \$17,000 was later withdrawn to make purchases.

The depositors practise foresight in determining ahead of time their future needs; they exercise self-control in denying themselves present trifles in order to make worth-while purchases in the future. Altogether the Penny Bank of Ontario is making a definite contribution to the development of good citizenship among the boys and girls of the Province.

Agents for School Supplies

For a number of years many of the young teachers who are in charge of their first schools have been visited soon after the beginning of the school term in September by itinerant "high pressure" salesmen who have often represented themselves as special officials of the Department of Education. As a consequence, the teachers have purchased materials which were supposed to be very helpful, but which in many cases, were found later to be of little or no value. The Department of Education has endeavoured through the co-operation of its

officials to protect these young teachers against such unfair and dishonest practices (1) by asking the normal school principals to advise the teachers-in-training against making purchases from these itinerant salesmen, (2) by requesting the Inspectors early in the school year to counsel beginners against such purchases, (3) by advising teachers who communicate with the Department regarding the deception practiced by agents to make no further payments if they can prove that they were persuaded to make the purchases through misrepresentation, and (4) by the issue of a circular letter to Inspectors for distribution among teachers cautioning them not to purchase from itinerant agents. It is very gratifying to note that as a result of these efforts of the Department very few, if any, communications reporting fraudulent practices on the part of salesmen have been received from teachers during the current school year.

The Closing of Small Schools

It is generally recognized that pupils in small ungraded rural schools do not make satisfactory progress. It is also the policy of the Department of Education to reduce the cost of education wherever possible without impairing its efficiency. With these two factors in mind a substantial number of such schools were closed during the year and provision was made for the conveyance of the pupils to other schools where, as part of larger groups, more effective instruction could be given and finer social qualities could be more effectively developed. In most cases the boards of trustees readily acceded to the suggestion to close their schools; in others some persuasion was required. These small schools are closed temporarily and may be re-opened when the Minister feels that such action is justified. A saving of \$100.00 to \$300.00 is in this way made to the ratepayers of each section and an equal amount to the Department of Education. The number of schools closed in 1936 was twenty-six, and the cases of sixty-five others with an attendance of eight or fewer are under consideration for closing at midsummer, 1937.

The Department is kept informed by the Inspectors from time to time respecting schools where the number of pupils of school age living in the section is fewer than eight for two consecutive years; and where there is little prospect that the number of pupils for the next succeeding years will exceed eight it is now a matter of policy to ask that the school be closed. The Public Schools Act requires that boards of trustees shall be elected, as formerly, in school sections where the schools are closed and that the boards shall give the proper care to the school properties and arrange for the tuition of the pupils in neighbouring schools.

Assisted Schools Grants

There are approximately 300 elementary schools in the Province in which the equalized assessment is less than \$10,000; over 500 where the equalized assessment is more than \$10,000 but less than \$25,000; and 325 where the assessment is more than \$25,000 but not more than \$50,000, or in all, approximately 1,125 schools in which the equalized assessment is \$50,000 or less. This means that there is a substantial number of the elementary schools which require more financial assistance from the Department than is given to them through the regular legislative grants. To meet this situation a special appropriation is made each year by the Legislature. For the fiscal year, 1935-1936, the amount of \$110,000 was voted by the Government for this purpose. Of this sum an expenditure of \$109,841 was approved. For the fiscal year, 1936-1937, only

\$50,000 was voted for assisted grants and at the end of the calendar year, 1936, the amount of \$36,904.13 had been spent. The amount of special assistance which any poor school receives is based upon the recommendation of the Inspector for the area. He is in a position to know intimately the financial standing of the school section or urban municipality, as the case may be.

A Larger Unit for School Administration

Fifty years ago in the Province of Ontario the High School Entrance Examination was regarded as a suitable minimum standard of education and the percentage obtaining this standard was not large. At the present time a very high percentage of pupils in Public and Separate Schools gain this standard and go forward to advanced classes in the elementary schools or to the secondary schools. Further, it is found that the average age at which pupils in large numbers cease to attend day school is sixteen years. It seems necessary, therefore, that in both rural and urban areas an attempt should be made to provide satisfactory completing courses for those who will not attend school beyond sixteen years of age. At once a problem is presented in the rural areas. It is impossible to offer satisfactory completing courses in the one-teacher school in each school section. If suitable courses in shop work, home economics, business practice, and agriculture are to be given along with the other so-called academic subjects it becomes necessary at once that senior pupils should be grouped in central schools or class-rooms where the advanced completing work may be carried on. It is to be hoped, therefore, that some method may be found of bringing about larger administrative units of five to ten school sections under one board of trustees in order that there may be placed in a central location in the larger school area the senior class-room, or class-rooms, in which better completing courses may be offered to the older pupils. In the urban centres these completing courses may be offered in senior elementary classes or in the lower forms of the secondary schools.

There are many arguments in favour of larger units of administration in rural areas but the chief one is the making possible of better types of courses for those senior pupils who are largely to discontinue day school attendance at or about sixteen years of age.

Equipment Grants to Rural Public and Separate Schools

For several years, previous to the year 1936, a grant has been apportioned to rural public and separate schools on the basis of the amount expended by the boards of trustees on equipment, provided the expenditure is approved by the local school inspector. The term "equipment" was defined to include all school materials used directly for instructional purposes, also items of expenditure on blackboards, water supply, sanitary accommodations, desks, library equipment, and lighting. The amount of the grant has been 25 per cent. of the approved expenditure (less any *pro rata* reduction necessary for the year in the case of all grants) up to \$100.00 per class-room in the case of rural schools in the counties, and a grant of 50 per cent. up to \$200.00 per class-room in the districts. In the schools located in counties the county council in each case is required to apportion a grant at least equal to the grant on equipment made by the Legislature.

For the year 1936 the definition of the terms "equipment" and "accommodations" was extended to include all repairs, renewals or additions to school buildings or school grounds, all school furniture, artificial as well as natural lighting, heating, ventilating, and other approved changes in accommodations

and equipment which are paid for from current revenue. The definitions, however, do not include fuel, caretaking supplies, rental, interest, debentures, or sinking funds.

These grants have encouraged rural boards of trustees to purchase more and better equipment and to improve their school accommodations.

In the year 1935 no less than \$70,774.02 was paid out in Legislative grants on the basis of expenditure on equipment. This means that *at least* four times this sum, or \$283,096.08, was expended by boards to provide better equipment for the rural schools. In the year 1936, \$116,994.95 was received by the schools in Legislative grants on the basis of expenditures on equipment. When the contribution of the county council is added it means that at least \$233,989.90 was received in grants and that the total amount expended on equipment and accommodations by rural boards exceeded \$437,979.80. It is probable, therefore, that more than half a million dollars was invested by boards of rural schools in the year 1935, as the grants paid are based on the expenditures made during the next preceding calendar year.

General Remarks

The year 1936 has been a more favourable one for the Ontario elementary schools than any previous year since 1930. More money was available for school equipment and for repairs and renewals to the schools. A number of fine new school buildings were erected in both rural and urban areas. In many rural and urban areas boards of trustees found it possible to restore teachers' salaries to higher levels and in some few cases to the amounts paid in 1929 and 1930.

While the general Legislative grants were given a 10 per cent. *pro rata* reduction below the bases used for the distribution, the actual total amount paid was approximately \$200,000 greater than in 1935.

It is impossible to mention all the various organizations which have generously supported the schools through their co-operation with boards of trustees, inspectors, and teachers, and through direct gifts of necessary equipment and services which the boards were unable to supply. The Home and School Clubs, the Junior Red Cross Society, the Women's Institutes, and the Daughters of the Empire are all worthy of special mention in this respect.

In the making of this report thanks are due to Dr. J. T. Phair, Chief Medical Officer, Department of Health; Mr. R. S. Duncan, B.S.A., Director of Agricultural Representatives, Department of Agriculture; and to Mr. J. R. Littleproud of the Ontario Penny Bank for the contributions relating to their different phases of work with the schools. The co-operation of Departmental officials who have contributed brief reports of the activities of the special branches under their charge is also much appreciated.

V. K. GREER,
Chief Inspector.

March 5, 1937.

APPENDIX B

REPORT OF THE CHIEF INSPECTOR OF SECONDARY SCHOOLS

I have the honour to submit herewith the reports of the High and Continuation School Inspectors and the Director of Vocational Education, for the school year 1935-36.

June 30th, 1937.

GEO. F. ROGERS,
Chief Inspector of Secondary Schools.

1. Report of the High and Continuation School Inspectors

At the beginning of the school year 1935-36, it was decided by the Department of Education to place all the Collegiate Institutes, High Schools, and Grade A and Grade B Continuation Schools of the Province in one category, and to assign the duty of inspecting these schools to the four High School Inspectors and the three Continuation School Inspectors. Each Inspector was to visit all such schools in the district assigned to him. It was felt that all schools doing the same type of work should be under the same inspection and that by this arrangement time would be saved and travelling expenses reduced.

Appointment of Robert H. Wallace, M.A., as High School Inspector

During the first year of inspection under the new plan the Training College for Technical Teachers at Hamilton was not in operation. The Principal of the Training College, Mr. F. P. Gavin, B.A., was thus set free to act as High School Inspector. Mr. Gavin's wide experience and sound judgment made him an ideal man to serve as Inspector. But on the re-opening of the Technical Training College in September, 1936, Mr. Gavin returned to his duties as Principal.

In September, 1936, Robert H. Wallace, M.A. (Queen's, Harvard), of Hamilton Central Collegiate Institute, was appointed High School Inspector and took up the work of inspection in succession to Mr. Gavin. Mr. Wallace saw overseas military service in the Great War. He is recognized as one of the outstanding teachers of the Province in the department of English and History.

Changes in School Accommodations

In several municipalities new schools have been built and in other municipalities accommodations have been improved during the year. At Kemptville a combined Public and High School building has been erected to replace two buildings destroyed by fire. In Toronto the new Lawrence Park Collegiate Institute was opened in September, 1936. At Waterford a large wing has been added to the High School, and the older part of the building, which had been greatly damaged by fire, has been rebuilt and remodelled, thus providing a modern High School building.

New High School Districts

Embrun, Havelock, and Tilbury have become High School Districts.

Number of Secondary Schools

The number of Secondary Schools in the Province in September, 1936, is shown in the following table:—

Collegiate Institutes.....	69
High Schools.....	157
Continuation Schools.....	207
Vocational Schools.....	58
Special Industrial Schools.....	5

The following schools have a Vocational Branch with the same Principal as the corresponding High School or Collegiate Institute:

Collegiate Institutes: Barrie, Belleville, Brantford, Brockville, Cornwall, Galt, Guelph, Hamilton (Westdale), Kingston, Kitchener-Waterloo, Napanee, Niagara Falls, North Bay, Oshawa, Owen Sound, Pembroke, Perth, Peterborough, Picton, Renfrew, St. Catharines, Sarnia, Scarboro, Stamford, Stratford, Woodstock, York East, Earl Haig. York: Runnymede, Vaughan Road, York Memorial.

High Schools: Beamsville, Fort Frances, Haileybury, Ridgetown, Simcoe, Timmins, Welland, Weston.

Total, 39.

Decreasing Attendance

In the reports for 1934 and 1935 reference was made to the decrease in attendance at High Schools. The decrease continues to show in the Secondary Schools for 1936. The figures below will show the nature and extent of the change. The following are the official figures for May, 1935 and 1936:

Enrolment	Collegiate Institutes and High Schools	Continuation Schools
May 1, 1936.....	67,899	9,464
May 1, 1935.....	67,395	10,852
Increase.....	504
Decrease.....	1,388
Net decrease in enrolment.....	884
Average attendance—1935-36.....	64,763	8,951
“ “ —1934-35.....	64,369	10,347
“ “ —Increase 1935-36.....	394
“ “ —Decrease, 1935-36.....	1,396
Net decrease in average attendance.....	1,002

While it appears above that there had been an increase in 1936 as compared with 1935 in enrolment and in average attendance at Collegiate Institutes and High Schools, the increase is due to the fact that twelve Continuation Schools became High Schools during the period under review. But even when this is taken into consideration the falling off in attendance in Secondary Schools is great.

Inspection

During the academic year 1935-36 each Collegiate Institute, High School and Continuation School (Grade A or B) received one regular visit of inspection. The nature of the accommodations, the professional certificates of the members of the staffs, and the skill and efficiency of each teacher were carefully considered. In each school the Inspector took occasion to discuss with the Principal not only the organization and management of his school, but also the character of the teaching of each member of the staff. The Inspector also discussed with each teacher personally the work he observed in the class-room and made such suggestions as he deemed wise. In most of the schools the Inspector met the Chairman of the Board of Education, or members of the Board, or the Secretary, and in some cases all of these. School matters were discussed at some length in such cases. Often also the Inspector took occasion to meet the teachers in a body or in groups of teachers of the same subject. Meetings of such nature were always arranged by the Principal of the school, who, whenever he found it possible so to do, attended the meetings.

After each visit of inspection a report was made to the Minister of Education on the official form provided. A copy of the report is sent to the Secretary of the Board concerned. In some few cases where circumstances made it desirable, a second visit was made to a school in order to meet members or officials of the Board of Trustees and discuss with them changes or improvements in accommodations as well as other matters of interest.

During the closing months of the school year as many schools as possible received short visits from the Inspectors. At these visits the Inspector discussed with the Principal of the school (1) matters relating to the carrying out of the plan of recommendation of students for credit in the various subjects of the courses of study; (2) the character and effectiveness of the experimental work being done in connection with changes in curricula or in methods of teaching the subjects of Latin, French, etc.; and (3) the proposed scheme or schemes of organization for the following year. As a result of these short second visits the Inspectors and the Principals have been enabled to co-operate more effectively in the work of the schools.

In concluding this report the Secondary School Inspectors feel it a duty and a pleasure to be able to report that they have found among the teachers of Secondary Schools an enthusiastic and progressive spirit. Many teachers have availed themselves of the opportunity to attend summer classes provided by the various universities or by the Ontario Department of Education. Some teachers have taken at least a one-year course in Modern Languages in Europe or a long summer course in Physical Culture in Denmark or Sweden. Others have taken courses in French at Sillery Convent, Quebec, or at McGill University, or at Trois Rivières. Large numbers of teachers have attended the summer schools for Agriculture, Art, Physical Education, etc. The result has been a marked advance in the character and efficiency of the work of the schools.

upon which the grants are mainly based; and (b) a substantial annual grant towards the debentures issued in connection with four new technical schools in Toronto. The sharp fall in the line in 1932-33 is attributable to reductions in the Government grants necessitated by economic conditions. It is hoped that this decline has now been permanently arrested, and that the grants will be stabilized at least at the level attained in 1930-31, namely \$1,100,000. At its peak, the Legislative grant amounted to \$1,500,000. It will be seen that the day-school attendance shows an increase from 9,000 in 1922-23 to 37,000 in 1932-33; then there is a slight decline, followed by an almost complete recovery, with 36,000 students in attendance in 1935-36. Attendance at evening classes, standing at 34,000 in 1922-23, reached 47,000 in 1930-31, and then decreased to 22,000 in 1933-34 during the years of depression. The trend is now decidedly upward in both day and evening schools, and this will naturally have the effect of increasing the grants.

The Trend of Education

With the almost complete disappearance of the erroneous idea that education in the schools is possible only through the media of so-called academic studies, the contribution of vocational training towards the development of both mind and character is becoming more and more widely acknowledged. The value of "industrial arts" in the educative process is now freely admitted, even stressed, as the natural corollary of what is known variously as academic or cultural education. It is now thoroughly established that there is no conflict between the two types; each is dependent upon and complementary to the other.

There is no doubt that the work accomplished in vocational schools has contributed largely to this modern conception of education.

The success attending matriculation students in the courses provided for admission to university faculties of Engineering, Household Science, and Commerce has been most marked. Facilities for these courses are not available in the smaller centres; but as the majority of students do not proceed to university, the provision of Industrial courses for boys and Home-making courses for girls has supplied the type of training that is most needed.

Apprenticeship Education

The educational provisions contained in the Apprenticeship Act of 1928 placed the responsibility for suitable school training upon the educational authorities. The act provides for collaboration with the schools on the part of the Inspector of Apprentices, and definitely stipulates that any prescribed courses shall conform to the provisions of the Adolescent School Attendance Act and the Vocational Education Act.

The Apprenticeship Act was first brought into force in connection with the building trades, and included provisions for "intensive training in technical schools". In 1930 regulations were passed on the advice of the Provincial Apprenticeship Board, providing that in any municipality where the Board prescribed full-time or part-time courses of instruction for registered apprentices, Advisory Committees were required to make such arrangements as to accommodation, staff, and all other matters relating to such courses, as would meet the requirements of the Apprenticeship Board and have the approval of the Minister of Education.

While, under the Apprenticeship scheme, there is no thought of attempting to substitute training in a vocational school for actual service in the trade, it is recognized by the trades themselves that these schools are equipped to furnish

the particular educational background required to ensure for apprentices an insight into the principles underlying practical trade operations, while acquiring a sound general education. It is the consensus of present-day opinion that the co-ordination of the school and the job has been fruitful of improved results over the former haphazard system of attempting to teach a trade by the "pick up" method and the assumed good-will of the journeyman.

The "depression" seriously interfered with the process of training apprentices and rendered the results almost negligible. The building trades were so badly affected that the method originally adopted of financing the scheme by assessing the trades was temporarily abandoned, and the educational arrangements became largely inoperative through lack of apprentices.

It is now felt that owing to an expected shortage of skilled workers, the time has come when school preparation as a feature of apprenticeship should be re-emphasized in readiness for an anticipated return of prosperity. An important report on the subject is contained in a letter addressed to the National Employment Commission at Ottawa by the Apprenticeship Committee of the Canadian Construction Association. The committee entertained the idea that they might work to mutual advantage with the National Commission because of the connection between the threatened shortage of mechanics and the problem of placing young Canadians in useful occupations. After pointing out that the plan of "mixing" intensive technical education with the practical field work produced a much higher type of mechanic than the old apprenticeship method, the report states:

"It is doubtful if any piece of legislation, or any industrial movement for that matter, ever accomplished such satisfactory results for youth in industry in such a short time as the Ontario Apprenticeship Act."

This, it should be observed, is the considered opinion of a representative body of influential employers.

In the Seventh Annual Report for the year ended June, 1935, the Apprenticeship Commission of Victoria, B.C., makes reference to the preparatory educational requirements for apprentices. It expresses the opinion that

"failure on the part of some employers to select properly qualified and proved lads for apprenticeship is responsible for practically all of their troublesome apprentice cases";

and proceeds further to state that:

"It has been realized in overseas countries that, owing to the continuous changes in modern methods of manufacture and the need for greater efficiency, more and more will industry have to rely on the technical schools to teach apprentices how to apply their skill in modern ways and how to adapt themselves to new methods and materials".

and adds that:

"Part-time day attendance at technical schools is a feature of most of the apprentice training schemes adopted by those countries".

Accepting these statements as reasonably accurate, their implications strongly support the conclusion that training in a vocational school has been wisely included as part of the terms of apprenticeship. These schools were created in response to the demands of Industry. In them youth is being prepared for employment by a training based on the fundamental principles which will develop leadership in the industrial occupations in which they will eventually find a place. It is well known that the scarcity of trained apprentices has been

causing grave concern to the various trades, and it is gratifying to know that the vocational school is regarded as an essential feature of plans to establish a more efficient and dependable method of training the artisans of the future than has been pursued in the past.

Conclusion

Vocational Education, constituting as it does a preparation for meeting the actual conditions of modern life, tends to provide a general and social culture abreast of the times and well adapted to the important tasks which the youth of to-day will be called upon to assume upon taking their places in society.

The following table of comparative statistics gives a complete picture of the situation in this Province for the past two years, in comparison with the year 1922-23:—

	1922-23	1934-35	1935-36
Number of Schools—Day.....	16	61	60
“ “ —Evening.....	51	30	28
Number of Pupils—Day.....	9,402	33,561	35,915
“ “ —Evening.....	33,511	23,803	24,360
Number of Teachers—Day.....	337	1,416	1,449
“ “ —Evening.....	1,097	745	766
Government Grants.....	\$638,217	\$1,145,599	\$1,112,078
Municipal Expenditure (Net).....	\$1,233,397	\$4,287,665	\$4,079,358

F. S. RUTHERFORD,
Director of Vocational Education.

Toronto, May 28th, 1937.

APPENDIX C

REPORT OF THE DIRECTOR OF PROFESSIONAL TRAINING

1. Decrease in Number of Teachers-in-Training

The attendance at the Normal Schools during the 1936-37 session was considerably lower than during the previous year. This may be explained partly by improved economic conditions, which have opened up opportunities in the business and industrial world, partly by the realization that the teaching profession has for some years been overcrowded, and partly by the higher standard of scholarship—Upper School standing—now required for admission. Though the *quantity* of the student body as measured by numbers, has diminished, the *quality* as measured by mental ability has advanced.

The surplus of teachers appears to be decreasing through gradual absorption in the schools as vacancies occur through the retirement of other teachers in the natural course of events. If the low attendance in the training schools continues, the Province will soon experience a shortage of teachers for the elementary schools.

The single exception in the record of lowered attendance is the University of Ottawa, in which French-speaking teachers are trained for the English-French schools. Beginning with an attendance of 14 nine years ago, this school has made such rapid strides that the enrolment for each of the past three years has been well over two hundred. Second Class as well as First Class teachers are being trained in this school in order to provide as early as possible the schools attended by French-speaking children with teachers of higher qualification than they had when the Committee of Inquiry made its report in 1927. This Normal School is responsible for the raising of the percentage of First and Second Class teachers in the English-French schools from 13 per cent. to 75 per cent. within a decade. The standard of the work is on a par with that in the other Normal Schools, and so excellent is the command of English possessed by the students that the casual visitor would find it difficult to distinguish the class-room work in English from that of the other Normal Schools.

2. Improvement in the Qualification of Teachers

The discontinuance two years ago of training teachers for the Interim Second Class certificate, except in the University of Ottawa Normal School, has already had marked results in the advancement of the general status of qualification throughout the schools. It is a matter of satisfaction to the Department that such large numbers of teachers holding Interim Second Class certificates are advancing towards First Class standing through private study and through the Departmental summer courses. Many holders of Permanent Second Class certificates, not wishing to continue with the lower standard of qualification, are taking steps to obtain Permanent First Class certificates.

It is a tribute to the ambition, industry, and enthusiasm of the teachers of this Province, that in 1936 more than five thousand attended special summer courses provided by the Department of Education, and at least as many others attended courses provided by the universities. This means that more than half of all the elementary teachers of the Province utilized a part of their vacation to

advance their qualifications. The unanimity with which they have accepted as reasonable and desirable the Departmental regulation regarding permanent certificates indicates the excellence of the spirit that prevails among the teachers of Ontario.

3. Changes in Methods of Conducting Practice Teaching

Up to the present year, 1936-37, the plan in operation in all the Normal Schools for practice teaching was what might be called the "single lesson" system. Each student was assigned one lesson to be taught in the practice school each week. Towards the end of the session an effort was made to have each student take complete charge of a class-room for a half-day. This plan gave a fair degree of practice in the technique of teaching single lessons and to that extent was commendable. But it gave the students little opportunity to teach a series of lessons in succession or to become acquainted with the real problems of administering a school. It is more than probable that many failures in teaching might be traced to the lack during the training course of direct experience in many of the activities involved in teaching and managing a school.

In a new plan adopted during the 1936-37 session of the Normal Schools, the students are first given the opportunity of teaching six or eight single lessons each to familiarize them with the application of the main principles of teaching and to give them some control of the technique of instruction. After this preliminary training, the whole student body is divided into four sections, and each section is sent in succession for a week at a time in groups of two or three to the class-rooms of the practice schools. During the first day, the students merely observe the work of the class; during the second day each teaches at least one lesson; during the third and succeeding days the number of lessons for each student is increased; and towards the close of the week each takes complete charge of the room for a half-day. This section of students spends the next three weeks in the Normal School, the other three sections going out in succession in the meantime. In the fourth week the first section goes again to the practice school and the rotation is continued till the end of the session. It is thus arranged that each student shall have four or five complete weeks in continuous observation and teaching, at least one week of which is in an ungraded rural school. The work of the week includes, of course, frequent discussions with the critic teacher of the lessons observed and taught. In order not to place too great a strain on the critic teachers, only half of them have students in any given week, each being free of the practice work on alternate weeks.

The change of scheme has thus far proved satisfactory to all concerned, and has afforded the students much better practical training under less artificial conditions than those formerly prevailing. They now have the opportunity to appreciate the problem of guiding successfully the activities of the pupils for longer periods and to acquire some skill in the continuous direction of a school.

4. Changes in Examination Scheme

For several years, Normal School students who have obtained a minimum standing of sixty per cent. in their sessional work in the various subjects, including observation and practice teaching, have been passed by the Department on the recommendation of the staffs. This plan has resulted in reducing the examination work of the schools by more than half and in relieving outstanding students of part of the burden and anxiety of the course. Few of the students, however, are exempted from all of the examinations, though the great majority are not required to take all. Those who have failed to attain the minimum

standing in any of the subjects during the session must take final examinations in those subjects. The question papers for about half of these examinations have in the past been prepared by the Department and those for the other half by the staffs. The answer papers in all the subjects have been valued exclusively by the staffs. In this way the certification of inefficient teachers has been fairly effectively prevented.

For 1937 this scheme has been slightly modified. The staffs of the schools will still have the responsibility of selecting those students of whose efficiency and success there can be no doubt, and the Department will continue to pass such students in those phases of the course in which they are recommended. For the doubtful candidates, however, all the question papers will be prepared by the Department and the answer papers will be read in Toronto by committees of Normal School teachers upon a plan similar to that adopted by the Departmental High School examinations. It is hoped that in this way greater uniformity of standards will be maintained.

5. Changes in Staff

During the year three changes occurred in the staffs of the training schools. Miss L. M. Loriman, who had been in charge of the Fourth Form girls in the Ottawa Normal-Model School, and Miss Agnes Copple, who had been Music Instructor in the Ottawa Normal School, resigned to be married. Miss Jean D. Currie, who had been in charge of Form I boys in the Toronto Model School, died in the Autumn of 1936. Miss Currie was an efficient and painstaking teacher and her untimely death was a distinct loss to the staff. The positions of Miss Loriman and Miss Copple at Ottawa were filled respectively by Miss Margaret O. Cleland, B.A., formerly English teacher in the Sturgeon Falls Model School, and Mr. Quirt S. McKinney, formerly Music Instructor in the Glashan Public School, Ottawa.

6. The Passing of Dr. Merchant

The death of Dr. Francis Walter Merchant on January 30th, 1937, closed a career that is unique in the educational history of Ontario. After serving as principal of several of the largest Collegiate Institutes in Ontario, he was appointed in 1900 the first principal of the London Normal School. In 1908 he was made Chief Inspector of Public and Separate Schools and Inspector of Normal Schools. In the latter capacity he reorganized completely the training school system of the Province, and the essential features of that system still remain in our present scheme. This may be regarded as one of the most fruitful of his many educational activities. He was later made Director of Technical Education, and in 1923 he was elevated to the post of Chief Director of Education. He retired from active participation in administrative affairs in 1930, but was retained as Chief Educational Adviser to the Minister until his withdrawal from the Department in 1934.

Dr. Merchant's success as an educational administrator is explained in part by his clear grasp of the meaning and purpose of education and by his intense desire to give every boy and girl in the Province the best possible educational opportunities. But above all it was the result of his initiative and originality in devising plans for the attainment of what he conceived to be the true aims of education, and of his driving force and powers of leadership in securing the realization of those aims. Dr. Merchant's name will always stand high in the roll of great Canadian educationalists.

**7. Attendance at the Normal School and Normal-Model Schools during the
1936-37 Session**

Normal Model Schools	Number of Teachers on Staff	Number of Pupils
Ottawa.....	14	416
Toronto.....	17	507
Total.....	31	923

I cannot close this Report without a well-deserved tribute to the work of the members of the staffs of the Normal and the Model Schools. Their progressiveness, their excellence as teachers, their industry, their devotion to duty, and their whole-hearted co-operation in carrying out the policies of the Department in their particular field are worthy of all praise.

W. J. KARR,

Director of Professional Training.

Toronto, April 8th, 1937.

APPENDIX D

**REPORT OF THE DIRECTOR OF FRENCH INSTRUCTION
ON THE SCHOOLS ATTENDED BY FRENCH-
SPEAKING PUPILS, 1936-37**

Since 1927, the schools attended by French-speaking pupils have been operating in accordance with the recommendations made in the Merchant-Scott-Coté report. Each year, marked progress has been noted in the ability of the pupils to use both languages and in their better mastery of the subjects on the course of study. When it is realized that a system of education which embraces the study of two languages must necessarily evolve slowly, the progress achieved in the short space of nine years has been remarkable.

In order to obtain a general idea of the conditions at present prevailing in the schools attended by French-speaking pupils, the Department, in the autumn of 1935, sent out a questionnaire to the Inspectors asking for the following information:

- (1) Number of one-room rural schools which you consider satisfactory from a general standpoint.
- (2) Number of such schools which you consider as being only fair, but which are improving from year to year.
- (3) Number of such schools which are poor and in which the progress is unsatisfactory.

The Inspectors were asked to make a similar report on the rural schools of two or more class-rooms and also on the urban schools.

Of a total of 471 rural and urban schools attended by French-speaking pupils, the Inspectors reported as follows: 40 per cent. of the schools are generally satisfactory; 45 per cent. are only fair, but are improving from year to year; 15 per cent. of the schools are poor and are not making satisfactory progress. In the case of poor schools, since the large majority of these are one-room rural schools, the percentage of poor classes in relation to the total number of French-speaking classes in the Province, approximately 1,300, is very small indeed. Nine years after the Merchant-Scott-Coté Committee had made a most unfavourable report on the general conditions of these schools it may truly be said that the school in which the progress is unsatisfactory has now become the exception. There is every reason to believe that the schools now graded "fair" will continue to improve and will be classified as "good" schools in the not too distant future.

Although it has been stated that the majority of the poor schools are one-room rural schools, one must not conclude that there has been no general improvement even in these. Of a total of 293 schools, 30 per cent. are generally satisfactory; 50 per cent. are fair; and 20 per cent. are poor. While these schools have not improved as rapidly as the others, if the deplorable state in which they were found in 1927 is taken into account, it must be admitted that much progress has been made. It should be remembered that, in these schools, the enrolment is usually large and the salaries small. It is, therefore, difficult for the boards to engage experienced and highly qualified teachers.

Qualifications of Teachers

In the schools attended by French-speaking pupils, there are approximately 1,300 teachers, of whom 75 per cent. are graduates of the University of Ottawa Normal School. In September, 1938, the minimum requirements for teaching in these schools will be Second Class certificates. The marked improvement in the qualifications of the French-speaking teachers of this Province since the year 1927 (when only 13 per cent. were Normal School graduates), coupled with the conscientious and effective work of the Inspectors, explains the rapid advancement made.

High School Entrance Examination

During the year 1936, of a total enrolment of 41,500 French-speaking pupils, 1,624 passed the High School Entrance Examination. While it must be admitted that this number is much below the required standard, it should be noted that the percentage of successful candidates compared to the total enrolment in the schools has doubled since 1928. In other words, if we adopt as a standard the number of pupils who complete the elementary school course up to Form V, we may say that the efficiency of the schools has been improved 100 per cent. in the short space of nine years.

Enrolment in Form V, Lower School, Middle School, Upper School

It is very gratifying to state that a large percentage of the pupils pursue their studies beyond Form IV. There are 1,544 pupils enrolled in Form V classes; 800 are taking the Lower, Middle, and Upper School courses in High Schools in which the special French course has been established; approximately 500 are taking these same courses in private schools and colleges. In 1927, some 500 French-speaking pupils were taking work beyond Form IV. In 1936, this number was nearly 3,000. It seems needless to stress the significance of this comparison.

Proficiency in the Various Subjects

Languages. To those who are not familiar with the work being done in the schools attended by French-speaking children, the acquisition of two languages would seem to impose a very heavy burden on the pupils. Experienced teachers know, however, that the efforts of young children in mastering a new language are not nearly so great as one would expect. In the study of two languages, there is no doubt a very great transfer of capacity from one field to the other. Ability in the use of the mother tongue facilitates greatly the acquisition of another language. Under efficient instruction, French-speaking pupils who have been well trained in French acquire the ability to read and spell English with comparative ease. The study of English grammar is greatly simplified by a knowledge of French grammar. The mental process involved in analysing a poem, parsing a sentence, or developing a topic in composition is applicable to any language. The best proof of this transfer of capacity may be discovered in any average class of French-speaking pupils working under normal conditions. In such a class, it is usual to find that pupils who stand high in French measure up well in English and that the weakest pupils are usually poor in both languages. It might be added that French-speaking children are introduced to the study of English at a stage in their school lives when the aptitude for learning languages is at its maximum.

In centres where the French-speaking pupils come in contact with English-speaking pupils, the problem of teaching conversational English is greatly simplified. When these pupils reach the senior classes, they speak English with a facility approaching that of English-speaking children. In such cases, the work of the teacher consists mainly in correcting mistakes, improving the pronunciation, and enlarging the vocabulary. However, in most of the rural schools in Eastern and Northern Ontario, practically the only English which the pupils hear outside of school is that which comes over the radio. In these schools, conversational English based on the direct method is begun in the first year, with the object of giving the pupils an English vocabulary that will enable them to begin reading English in an intelligent manner during the second year. Usually, the pupils acquire a simple everyday vocabulary very quickly and it is not unusual to find pupils of seven or eight years of age who are able to answer in English with surprising facility questions based on a story they have heard or on a picture they have studied.

As soon as the children are introduced to the reading of English the acquisition of a vocabulary proceeds rapidly, especially if they have access to interesting supplementary reading books provided by the Board. In addition to the reading, the teachers work methodically to increase the pupils' vocabulary through the medium of stories and picture study, as well as through history, geography, and arithmetic, in the teaching of which both languages are used. Proof of the success that is being achieved is found in the fact that last June over 500 French-speaking pupils from the rural schools, most of which are located in French communities, were successful at the High School Entrance examination.

Side by side with the teaching of English, the teachers are endeavouring to give French-speaking pupils the best possible training in their mother tongue. Previous reports have already called attention to the great improvement made in the standard of both the oral and written French. This is substantiated by the reports of the Inspectors themselves. The increasing number of French-speaking pupils who pass in the special French papers of the High School Entrance examination each succeeding year, as well as the comparatively large number of pupils who take the Special French course in the secondary school classes, is ample proof of the progress being made. In 1928, there were only fourteen French-speaking pupils who had the academic standing required for admission to the University of Ottawa Normal School. During the past three years, the average yearly attendance at this school has been over 225 pupils. This does not take into account the French-speaking pupils who did not complete their High School course or those who did not choose to follow the teaching profession.

History, Geography, Arithmetic. Methods in the teaching of history and geography have been greatly improved. The story method of teaching history has largely replaced the text-book method which was in vogue a few years ago in most of the schools. A better presentation of the subject matter and a more general use of concrete material have created in the pupils a much greater interest in the study of geography. It is felt, however, that in many schools which are in charge of inexperienced teachers, the pupils do not assimilate sufficiently well the subject-matter in both history and geography. A more active participation in the lesson by the pupils and less teaching on the part of the teacher would produce better results.

The Inspectors report that arithmetic is weak in many schools. This deficiency is the result of a weakness in teaching the fundamental rules, combined with a lack of practice in the solution of problems in the junior grades.

When the pupils reach the senior grades, they are inaccurate in their work, and what is worse, they do not know how to attack problems. In order to overcome this weakness, the Inspectors have been encouraging speed drills and competitive tests on the fundamental rules, as well as conducting daily exercises in the oral solution of problems in all grades.

Music, Physical Culture, Hygiene, Art, Nature Study, Agriculture. As the course of study for French-speaking pupils is fairly heavy, the teachers are instructed to stress the teaching of English, French, geography, history, arithmetic, and writing. However, as the proficiency of the pupils increases and the qualifications of the teachers are raised from year to year, more time can be devoted to music, physical culture, hygiene, art, and nature study. In view of the natural tendency which French-speaking pupils show for music, it is pleasing to state that rote singing is taught in practically all the schools. In some of the urban centres, the school boards have co-operated with the inspectors and the teachers in encouraging the teaching of music, and the results have been most gratifying. Apart from its cultural value, music gives pupils the mental relaxation necessary after long periods of concentration and without which the ability of the pupils to assimilate knowledge is greatly reduced; it creates a happy atmosphere in the class-room and, in general, reacts favourably on all the work of the school. After the pupils leave school, their appreciation of good music, together with their ability to sing, even in a limited degree, may prove to be a life-long source of enjoyment.

The subject of physical culture is also being given more attention than formerly. In many schools, a short period is set aside three or four times a day for simple exercises which are performed whenever signs of mental fatigue manifest themselves in the class-room. In some of the urban schools which have facilities for physical training, one or two periods a week are set aside for special drills. It is to be regretted, however, that in too many of the schools supervised play is not being given the attention it deserves.

It is expected that, as conditions in the schools improve, more time will be given to the teaching of art, hygiene, and nature study. It should be possible to devise an elementary course in art which would require but a very small portion of the time now being spent in teaching the fundamental subjects. A correlation of hygiene and nature study with language work would not increase unduly the work of the teacher. The promotion of good health habits and the development of an intelligent and kindly attitude towards nature are very important factors in the education of children.

In view of the fact that a large proportion of the French-speaking children now attending the rural schools will eventually be engaged in farming, it is vitally important that they should become interested in the subject of agriculture and that they should acquire, while at school, a certain amount of knowledge and training which will help to make their life work more enjoyable and more remunerative. Owing to the lack of properly qualified teachers, little improvement has been made in the teaching of this subject. It should be noted, however, that as the inspectors are encouraging their teachers to take a course in agriculture as one of the requirements for permanent certificates, the teaching of the subject will gain in efficiency with the increase in the number of properly qualified teachers. The excellent results obtained in a few rural schools in which the subject has been introduced, e.g., Separate School No. 2 Tiny, and Separate School U 1 Capreol and Hanmer, show what can be accomplished in this field when the pupils are in charge of teachers who are qualified to teach the subject effectively.

In this report, an attempt has been made to give a general summary of the conditions found in the schools attended by French-speaking pupils. To those who are conversant with the conditions as revealed by the 1925-27 report on the schools, the progress accomplished during the past few years is a source of great satisfaction. For this improvement, the Department is deeply indebted to the teachers, the inspectors, and the staff of the University of Ottawa Normal School, who have all worked conscientiously towards the great objective of having the French-speaking pupils of this Province acquire an education which, while meeting the wishes of their parents, will enable them to work and live in harmony and friendship with their English-speaking compatriots. It is confidently expected that the general public will continue to give these schools its sympathetic co-operation so that the arduous efforts of those who are concerned with the education of the children may continue to be fruitful.

A. J. BÉNETEAU,
Director of French Instruction.

Toronto, April 5th, 1937.

APPENDIX E

**ONTARIO TRAINING COLLEGE FOR TECHNICAL
TEACHERS**

Owing to the fact that very few applications for enrolment in the Training College were received for the session of 1935-36, no classes were held. The principal, Mr. F. P. Gavin, and Mr. Ashcroft, of the teaching staff, served temporarily as Inspectors of the secondary and vocational schools respectively.

APPENDIX F

REPORT OF THE INSPECTOR OF AGRICULTURAL
CLASSES

The year 1936 has been marked by continued progress in the extension of Agricultural instruction in the schools of Ontario. It is worthy of note that this progress persisted during the depression years and that there is an increase in the number of schools for 1936 in spite of changes in Regulations by which the special grants paid to teachers have been materially reduced. Grants to uncertificated teachers in elementary schools were discontinued as from January 1st, 1936, and grants to teachers in secondary schools were reduced by approximately fifty per cent. The fact that the number of schools in which the subject is taught, as detailed in subsequent tables, shows an increase over last year, is a sure indication that the value of the subject is recognized and that teachers and boards are continuing and introducing the work because of the interest and benefit to pupils in the schools. Additional figures based on reports for September, 1936, show that in the majority of ungraded elementary schools, the courses in Agriculture are being taken even where the teacher does not qualify for a grant and that in ninety per cent. of rural schools the courses in Agriculture are being followed.

The courses for the elementary school must of necessity be simple and the discussion of topics should be within the comprehension of the pupils. They are not essentially vocational in character for most of these pupils are too young to have decided definitely on a life activity. The purpose of these courses is to give, through observation of materials and discussion of facts, a knowledge of many things which would not otherwise be included in an elementary school course. The nature of the discussions for the rural pupil who has a background of experience in methods by which Agricultural products are produced should be different from that of an urban pupil who is more familiar with the products as they reach the consumer. In either case the result of the time given to Agriculture will be to broaden the pupil's knowledge of things about him. Nevertheless, it must be remembered that more than 40 per cent. of pupils in elementary schools do not attend more advanced schools and that for these the discussion of Agricultural subjects should have a definite relation to activities they will be engaged in after leaving school.

Agricultural courses in secondary schools should have a vocational trend, but except in twelve schools, the work taken is a part of the courses leading to Normal Entrance and Matriculation. Practical applications of topics studied are included in the courses and in many cases are stressed by teachers in assigning home projects. Even in Vocational Agricultural Departments some consideration has to be given in organizing the courses to the needs of the few who may wish to attend Normal School or University. This condition presents a serious difficulty to the extension and development of Agricultural instruction and is due to the more or less popular opinion that farming as a vocation is not on a par with other activities in offering an opportunity for success to the pupil with ability. In considering preparation for future activities of pupils, there is a tendency to emphasize professional, business, and industrial careers as being worth while and requiring training at school while little is said of the training necessary for success in farming.

The time has come when it should be more generally recognized that the boy of to-day who will be the farmer of to-morrow must have a good general education and special training in the scientific principles of Agriculture. This training should include: a study of noxious weeds, plant diseases and insects which affect different crops and a knowledge of approved methods of control; an understanding of the principles of maintaining and improving soil fertility by proper methods of cultivation, the use of crop rotations, and the application of fertilizers; a knowledge of the characteristics of the recognized breeds of live stock, the principles of breeding and good methods of feeding and care; a consideration of different varieties of fruits, vegetables, and field crops recommended for the locality; the principles underlying methods of beautifying home surroundings; and, finally, the ability to make use of special information furnished from time to time in bulletins and reports of the Departments of Agriculture and other Agricultural publications. These topics are dealt with in the secondary school courses, but too often their value is underestimated and boys who have decided to farm leave school as soon as they have reached the age when compulsory attendance is no longer required. In this respect opinion in Ontario is behind that in Michigan, Wisconsin, and Minnesota, States in which I was privileged to visit a number of schools in September. In these and other States, Vocational Agricultural Departments may be introduced in the schools under the provisions of the Smith-Hughes Act. Where the work is taken one finds that practically all boys from farm homes are enrolled in the Agricultural option, a four-year course, the purpose of which is to provide a good general education and a training in up-to-date and scientific methods of farming. The project activities are carried out on the home farm and their successful completion is essential for promotion. Most of these students are taking the courses because they expect to become farmers. In Ontario we have not yet reached this stage. There is still the tendency to belittle secondary school training for the boy who intends to farm. Nor is it fully recognized that special training in Agriculture will benefit the future farmer or that such instruction should be a part of the secondary school curriculum.

The progress made in the past is laying the foundation for broader, more comprehensive, and more practical courses in Agriculture which, however, can come only when the people of rural areas whose children attend our secondary schools demand such courses.

A new departure which brought to thousands of boys and girls the opportunity to view Agricultural products at their best was afforded by the arrangements made last fall whereby pupils from schools within a radius of 75 to 100 miles attended the Royal Winter Fair. On six different days students from secondary schools came by bus and motor car to spend the day at the Fair. A total of 14,000 attended and all were able to see the best of live stock, fruits, vegetables, grains, and other products of the farm which were there exhibited. Many expressions of appreciation were voiced by principals, teachers, and students for the opportunity given and the arrangements which were made.

The subsequent paragraphs of this report deal with the work carried on in the elementary schools, secondary schools, summer schools, and the Normal Schools, and a perusal of these paragraphs will give detailed information as to the progress in these different groups.

Public and Separate Schools

The number of schools which have met the requirements of the Regulations and qualified for grants for Form III, Form IV, and Form V since 1903 is given in the abbreviated table following:—

Year	Number of Schools	With School Gardens	With Home Gardens
1903.....	4
1913.....	159
1914.....	264	208	56
1920.....	1,648	702	946
1928.....	3,395	1,059	2,536
1932.....	4,906	1,344	3,562
1934.....	5,201	1,594	3,607
1935.....	5,427	1,773	3,654
1936.....	5,534	1,619	3,915

The figures for 1936 show that of the 7,174 elementary schools in Ontario, 77.1 per cent. reported instruction in Agriculture as follows: 4,990 of 6,132 rural schools, or 81.5 per cent., and 544 of 1,042 urban schools, or 52.2 per cent. In many Inspectorates in Southern Ontario all schools are taking the work.

It will be noted that there is a decrease in the number of school gardens for 1936 as compared with 1935. This is largely due to a demand for a higher standard in the work than was formerly required. Unless a garden is properly planted and cared for it is of little credit to the school, the teacher, or the subject and, therefore, in some cases this activity has been discouraged. In others it has seemed wise to abandon the school garden in favour of a programme of beautification of the school grounds, with greater attention to the planting and care of flower beds and shrubs.

The new courses in Agriculture, introduced in September, 1935, are now in use for the second year and are followed in practically all the rural schools. This is an indication that they are meeting with the approval of all concerned. Sections B and C of the course were adopted as the basis of instruction in Agriculture at the Normal Schools for the school year 1936-37 so that new teachers who begin work in September, 1937, will be familiar with the subject matter of Course C, which will be followed in ungraded schools next year.

The following table shows the number of certificates held by teachers engaged in the work for the years given:—

Year	Part I			Part II	
	Elementary	Elementary	Intermediate	Intermediate	Total
1934.....	1,552	86	144	10	1,792
1935.....	1,957	106	163	16	2,242
1936.....	2,092	208	188	22	2,530

The records show that 5,882 Elementary and 864 Intermediate Certificates have been issued since 1909 when the Regulations first provided for such certificates. A comparison with the above figures for 1936 indicates that a great many certificated teachers have left the profession or have accepted positions in urban schools where the certificate is not used. For 1936 less than half the teachers in the schools which reported instruction in Agriculture held certificates, but it is probable that sixty per cent. will be qualified for 1937 because of the large attendance at the Summer Schools in Agriculture.

In addition to the courses for Form III and Form IV, Agriculture of the Lower School course was taken in Fifth classes of 436 schools under the Regulations for Public and Separate Schools. The Lower School courses taught by a teacher holding an Intermediate Certificate are taken under the High School Regulations in the following schools:—

Britt Consolidated; S. S. No. 7 Biddulph, Granton; Elizabeth Ziegler Public School, Waterloo; R.C.S.S. No. 6 Ellice and Logan, Kinkora; General Mercer Public School, Toronto; Hespeler Public School; Innerkip Public School; Port Arthur—Central Public School, Cornwall Public School, St. James Public School;

Port McNicoll Public School; Port Stanley Public School; St. Michael's Separate School, Cobourg; St. Peter's Separate School, Peterborough; St. Raphael's West Separate School; Suddaby Public School, Victoria Public School, Kitchener; R.C.S.S. No. 8 Windham, La Salette; Tecumseh Public School.

Secondary Schools

Instruction in Agriculture in secondary schools is provided under three schemes as stated below and may be taken in those schools which meet the requirements of the Department of Education.

(1) Optional classes in Lower and Middle School as a part of the course for Normal Entrance or Matriculation.

(2) Department of Agriculture under the High Schools Act.

(3) Department of Agriculture under the Vocational Education Act.

Under scheme (1) above, Agriculture was taught during the year in the schools listed below. Under (a) are the schools in which Lower School courses only are taken and under (b) both Lower and Middle School courses.

Collegiate Institutes

(a) Clinton, Cornwall, Fort William, Goderich, Ingersoll, Oshawa, Perth, York Memorial, Vaughan Road. Total 9.

(b) Barrie, Belleville, Brockville, Cobourg, East York, Kitchener, Lindsay, Napanee, Orillia, Picton, Port Arthur, Renfrew, Runnymede, Scarborough, Smith's Falls, Stamford, Strathroy. Total 17.

High Schools

(a) Bracebridge, Cobalt, Durham, Englehart, Essex, Etobicoke, Kapuskasing, *Kemptonville, Lucan, Markham, Mattawa, Meaford, Merriton, Niagara-on-the-Lake, *Port Credit, Shelburne, †Thorold, Trenton, Uxbridge, Wingham. Total 21.

(b) Alliston, Amherstburg, Athens, Beamsville, Bowmanville, Brighton, Burford, Burlington, Caledonia, Cayuga, Dundas, Dunnville, Elmira, Fergus, Fort Frances, Grimsby, Hagersville, Haileybury, Iroquois, Kincardine, Kingsville, Leamington, Listowel, Markdale, Midland, Milton, Mitchell, Nepean (Westboro P.O.), Newburgh, New Liskeard, Norwich, Norwood, Oakville, Petrolia, Port Elgin, Port Perry, Ridgetown, Ridgeway, Rainy River, Saltfleet (Stoney Creek P.O.), Simcoe, Smithville, Stirling, Tweed, Waterdown, Waterford, Watford, Whitby, Winchester. Total 48.

Continuation Schools

(a) Ailsa Craig, *Ayr, Beaverton, *Bothwell, *Brooklin, Burk's Falls, Coldwater, Eganville, Fordwich, *Little Britain, *Melbourne, Merlin, New Dundee, Orono, †Southampton, Tamworth, Tilbury, †Wales, Woodville. Total 19.

(b) Agincourt, Brownsville, Comber, Drayton, Drumbo, Embro, Pelham (Fenwick P.O.), Florence, Ilderton, Lobo (Ilderton, R.R. No. 2), Lynden, Lyndhurst, Merrickville, Mindemoya, Mount Albert, Mount Brydges, Mount Elgin, Mount Pleasant, New Hamburg, Princeton, St. George, Sparta, Sundridge, Teeswater, Thamesford, Wheatley. Total 26.

*Introduced Agriculture in September, 1936.

†Discontinued Agriculture in June, 1936.

A summary of the above shows that Agriculture is now taken in twenty-six Collegiate Institutes, sixty-eight High Schools and forty-three Continuation Schools. During the year the work was discontinued in one High School and two Continuation Schools, but was introduced in two High Schools and five Continuation Schools. Both Lower and Middle School courses are taken in 91 schools.

The following abbreviated table shows the development in this phase of instruction since its beginning in 1913 and the number of schools now taking the work:—

	Collegiate Institutes	High Schools	Continuation Schools	Total
1913.....	..	1	1	2
1918.....	8	13	4	25
1923.....	8	23	4	35
1928.....	14	44	23	81
1933.....	24	54	33	111
1934.....	25	61	36	122
1935.....	26	67	40	133
1936.....	26	68	43	137

One hundred and seventy-eight teachers are engaged in giving instruction in Agriculture. Of this number one hundred hold the Specialist Certificate in Agriculture, of whom seventy-six are graduates of the Ontario Agricultural College.

The following schools are taking the work under the scheme indicated in (2) above: Drayton, Elmira, Listowel, Port Perry, Wheatley, and Whitby.

The organization of the work in these schools is the same as formerly reported and good work is being done in all. The modified plan of organization at Port Perry is now in the fourth year of operation and continues to meet with approval. Under this plan all pupils of first and second year receive instruction for one-fifth of the time in practical subjects. If the results for the fourth year are as satisfactory as those for the third year, one method of providing instruction in practical subjects in the small High School will have been established. Beginning in January, 1936, a six weeks' winter course in Agriculture, Farm Mechanics, and Household Science was held at Port Perry. This course attracted a number of young men and women who were not attending school and was quite successful. Short courses of this kind might well be provided in more of the schools where there are suitable accommodations.

Under (3) above the following schools are qualifying for grants under the Vocational Education Act: Beamsville, Kemptville, Renfrew, Ridgetown, Stamford, and Simcoe. At Stamford, provision is made for boys only, while at other centres courses in Home-making are also provided for the girls.

In all of these schools a very satisfactory type of work is being done and the courses offered are meeting the needs of the students and the approval of the communities. The first-year general course introduced at Ridgetown is now in the third year of operation. The results are very satisfactory and this plan might well be adopted by some of the other schools. At Simcoe, project work related to poultry, bee-keeping, and farm crops has been featured during the year. As a part of the work fowl were grown and dressed for market, and honey was produced and sold under the direction of the instructor.

At Kemptville, a new Composite School building was opened in December. Both public and secondary school pupils are housed in the one building. Rooms for Farm Mechanics and Household Science have been provided and equipped. Pupils from the Junior Fourth through to Form II will have regular instruction in these subjects. Agriculture is also taught during these four years. Grants under the Vocational Education Act are paid on the time of the teachers spent in giving instruction in the practical subjects as provided by the revised Vocational Regulations. The general organization and plan are commendable and provide for instruction in practical subjects during the years at the end of which many pupils leave school, but at the same time allowing those who continue to qualify for entrance to higher institutions of learning without loss of time.

The extension of Agricultural Departments under the Vocational Education Act in the past has been slow. It may be expected that with returning prosperity there will be a greater demand for the practical training offered by these courses, which have proved to be a benefit to a large number of boys and girls attending the schools.

Certificates and Summer Courses

Three special certificates in Agriculture—the Elementary, the Intermediate, and the Specialist—are issued by the Department of Education to those teachers who meet the requirements of the Regulations.

Teachers who have not taken Agriculture of the Lower and Middle School courses in a secondary school or who are not graduates of the Ontario Agricultural College must qualify for these certificates by attendance at Summer Courses held annually at the Ontario Agricultural College and at the Kemptville Agricultural School. Last summer, teachers from 125 Inspectorates were enrolled at these centres. The attendance at both centres set a high record, there being 330 at Kemptville and 791 at Guelph; a total of 1,121. The enthusiasm of the teachers at both centres was remarkable and the results of the Summer Courses generally were quite satisfactory.

The course for the Specialist Certificate was not given. In the course for the Farm Mechanics Certificate which was held at the close of the courses for Agricultural certificates, 24 teachers were enrolled.

The following tables show the attendance at the Summer Courses for the past five years:—

Attendance at Ontario Agricultural College, Guelph

Year	Elementary		Intermediate			Inspectors	Farm Mechanics	Total
	I	II	I	II	III			
1932.....	157	153	40	50	14	7	22	443
1933.....	107	123	35	39	..	3	13	320
1934.....	112	95	38	45	12	1	17	320
1935.....	188	112	61	46	..	2	..	409
1936.....	414	223	79	72	..	3	24	815

Attendance at Agricultural School, Kemptville

Year	Part I	Part II	Total
	Elementary	Elementary	
1932.....	48	29	77
1933.....	26	30	56
1934.....	19	28	47
1935.....	116	40	156
1936.....	220	110	330

Normal Schools

Instruction in Agriculture at the Normal Schools is a part of the regular course for a First Class certificate and is taken by all students, but does not lead to a special certificate in the subject. The instructors are fully qualified and the practical phases of the work in gardening and other topics are stressed as far as possible with the accommodation and equipment available. At the first opportunity, however, graduates of Normal Schools who are engaged in rural schools should qualify for a special certificate by attendance at Summer Courses.

NORMAN DAVIES,

Inspector of Agricultural Classes.

May 1st, 1937.

Urban Organization

Since the previous annual report new training classes have been opened in Belleville S.S. (1), Hawkesbury S.S. (1), Ridgetown (1), Scarboro No. 10 (1), St. Catharines (1), Sudbury S.S. (1) and new promotion classes have been established in Hawkesbury S.S. (1), Scarboro No. 10 (1), Sudbury S.S. (1), Windsor S.S. (1). The training class in Pembroke, which had been temporarily discontinued because of financial stringency, was reopened.

The Belleville Separate School, the Grantham Consolidated School, the Kingston Public Schools, the Niagara Falls Separate Schools, the Ridgetown Public School, the Windsor Separate Schools, and the Wallaceburg Public Schools were surveyed for purposes of auxiliary education. Application has been received for a survey of the Woodstock Public Schools. With the exception of three cities, Brockville, Cornwall, and Timmins, and several of the larger towns, all the more important urban centres throughout the Province have undertaken the provision of some form of auxiliary education. With the return of more prosperous times it is hoped that these unorganized centres may now see their way clear to give consideration to the needs of handicapped children and that certain of the larger cities may be able to round out their present organization more completely.

The rapid extension of auxiliary education throughout the Separate Schools of the Province during the past few years is to be especially noted.

Rural Organization

Complete surveys of rural inspectorates:—Grey North, Bruce North, 90 candidates, Inspector J. J. Wilson; Kent (1), 109 candidates, Inspector G. A. Pearson; Kent (2), Elgin (in part), 104 candidates, Inspector A. B. Lucas; Prescott-Russell (1), Lanark (in part), 53 candidates, Inspector C. B. Routley; District VIII Manitoulin Algoma (in part), 94 candidates, Inspector N. Wightman; and partial surveys of rural inspectorates:—Simcoe, Centre, 21 candidates, Inspector W. R. McVittie; District XIII, Parry Sound, Muskoka, 73 candidates, Inspector J. R. Pickering; were carried out by Miss DeLaporte and myself in conjunction with the inspectors concerned. In all 544 candidates were examined. For the large majority of those who were found to stand in need of assistance special educational facilities have been provided through the establishment of

rural training units for backward children, rural sight-saving units for children suffering from visual defects, rural home-instruction units for crippled children and rural speech-correction units for children handicapped by speech defects.

Up to the present time 10 rural inspectorates have been completely surveyed and 7 more partially. There are now in operation 61 rural home-instruction units, 146 rural sight-saving units and 705 rural-training units. A number of rural speech-correction units have been classed among the training units. Speech correction in rural schools is a recent venture. The moderate degree of success which has attended tentative efforts along this line leads to the hope that something of a substantially worth-while nature may be accomplished in providing remedial training for rural school pupils suffering under this handicap.

The rural home-instruction units are without exception functioning successfully and have been the means of bringing a new outlook upon life to the unfortunate children concerned. In addition to the 61 rural home-instruction units more than 100 sick and crippled children who cannot attend school are being looked after by means of correspondence courses.

The establishment of rural sight-saving units has likewise proved an unqualified success. Where such children pursue their studies in the regular grade classes with the help of large-type text-books they make as rapid progress as do similarly afflicted pupils, who, in the larger cities, are segregated in sight-saving classes.

Confidential reports from inspectors concerned go to show that on an average 65 per cent. of the backward pupils for whom special educational facilities have been provided markedly benefit from the help received. Many of the younger children after a year's treatment are enabled to return to the regular classes to make slow but profitable progress through the grades. Many of the seniors later leave school with renewed confidence in themselves and a happily readjusted attitude toward society. Due to frequent changes of teachers in rural schools or to inability of teachers to apply auxiliary class methods through lack of training or to as yet imperfect plans of procedure, some 35 per cent. do not respond appreciably to treatment. It is hoped that with wider experience a more effective technique may be developed. Appreciation is expressed of the whole-hearted co-operation extended by rural school teachers, trustees, and inspectors in making the venture the success it has been.

Arrangements have been completed for surveying the following rural inspectorates this spring:—Bruce East, Grey (in part), Huron (in part), J. M. Game; Elgin East, J. C. Smith; Frontenac North, Addington (in part), T. R. McEwen; Lincoln (in part), G. A. Carefoot; Northumberland and Durham (3), Hastings (in part), A. A. Martin; Renfrew, North, N. Campbell; Simcoe East, Muskoka (in part), J. A. Gibson.

Other applications are anticipated for next autumn. It is expected that by the end of 1937 one-fourth of all rural Ontario will have been surveyed and provision made for those children needing special help.

Methodology

In their efforts to simplify the presentation of various subjects auxiliary class teachers throughout the province have almost inevitably been compelled to undertake exploratory expeditions into heretofore unknown regions of methodology. Certain results are being briefly outlined not only because of their interest as educational experiments but likewise because of their possible value as suggestions to regular grade teachers.

Reading.—(1) Miss Matthews of Waterloo and Miss Detweiler of Kitchener, noticing, as every primary teacher has noticed, that children have less difficulty either in reading or spelling with such words as *automobile*, *house*, *jump*, and *yellow* than with words such as *why*, *are*, *there*, and *once*, began working on the hypothesis that the latter type of words, which may be briefly called “relative” words, have no meaning to children apart from sentences in which they occur and that to take them out of sentences and deal with them as words in themselves is only a cause for confusion. Accordingly, they conceived the plan of teaching only the former type of words, which may be briefly designated as “specific” words, by the “look-and-say”, “picture-place”, “action-name”, “flash-card”, and other similar devices. “Relative” words were to be dealt with both in reading and in spelling only in sentences or phrases. Thus a typical First Book spelling exercise would appear both in the presentation and the succeeding dictation test:

“Where is my hat?

Where is my coat?

Where are my shoes?”

Though this project involved a very considerable amount of labour, the success attending the venture and the good results attained by other auxiliary class teachers who have followed the same method cause one to wonder whether the so-called trivial errors which so frequently occur in Entrance Examination spelling papers may not be due to the failure of teachers to discriminate between the two word types. To an eight-year mind which experiences some difficulty in discerning any similarity between wood and coal, the sentence, “Where is my hat?” has meaning, while the word “where” taken by itself is merely an aggregation of letters without significance and easily confused with another similar meaningless aggregation.

(2) Miss Kellaway of Kent Street School and Miss Cairns of Duke of Connaught School, Toronto, working independently, have each compiled typed primers characterized by an extensive repetition of a few elementary words in sentence or short story form. These have been found particularly effective among very backward pupils who take delight in poring over books whose content is within their reading grasp. In ordinary graded classes similar results among more normal pupils are attained through blackboard reading. But for the ungraded rural school where class periods are limited in length it is possible that many modern primers have swung from the one extreme of all reading and no pictures to the other extreme of all pictures and no reading, especially where non-academic pupils are concerned.

History.—The majority of auxiliary class teachers throughout the Province now present History, not as a chronological list of events to be carried in the memory, but as lives of noteworthy people to be studied for social guidance. Thus the important thing about Alfred the Great is not that he defeated the Danes, nor that he founded the British navy, nor that he codified the laws of the land, but, as every schoolboy carries in effortless memory, that when military necessity required a dangerous bit of scouting to be done he went into the Danish camp himself and that when found negligent in the performance of a certain domestic duty he (though a king) took his deserved rebuke as became a man and a gentleman.

During a recent inspection tour it was interesting to find the boys of Mr. Slatton's class in Sarnia arriving at the same conclusion as did the girls of Mrs. Muller's class in North Bay concerning the relative degree of perseverance dis-

played by Jacques Cartier and Champlain. An understanding of the influence exerted by personal character in history would seem to be as important to growing boys and girls as a knowledge of dates and events. After all, Canada is not likely in the near future to be lost and stand in need of rediscovery. Every pupil, however, sooner or later will be faced with life problems the successful solution of which will depend upon his ability to stick to his task.

Arithmetic.—Extensive experimentation has been carried on throughout the entire field of arithmetic, two phases of which may be briefly noted:—

(1) Considerable confusion during early stages of learning may result from a premature introduction of algebraic symbolism. A backward pupil and possibly a normal child has difficulty in interpreting the operations indicated by the forms $6+8=14$, $14-6=8$, $6\times 8=48$, in the adding, subtracting, and multiplying operations respectively. Many auxiliary class teachers have adopted with success a simplified symbolism which conforms more nearly with actual working conditions. One stroke above indicates addition, two below, subtraction, one below, multiplication, thus:

$$\begin{array}{r} \overline{8} \quad \overline{24} \qquad \qquad \overline{14} \quad \overline{214} \qquad \qquad \overline{8} \quad \overline{348} \\ 6 \text{ or } 75 \text{ is "add up";} \quad 6 \text{ or } 156 \text{ is "add to";} \quad 6 \text{ or } 6 \text{ is "multiply".} \\ \quad \underline{28} \qquad \quad \underline{\quad} \quad \underline{\quad} \qquad \quad \underline{\quad} \quad \underline{\quad} \\ \quad \underline{36} \qquad \quad \underline{\quad} \quad \underline{\quad} \end{array}$$

(2) It would appear that much time and effort is sometimes wasted in learning one set of facts for addition and another for subtraction, one set for multiplication and another for division. In many auxiliary classes only two sets of facts are learned for the four operations and the processes are simplified by

maintaining an identity of statement throughout; thus in both $\begin{array}{r} \overline{854} \quad \overline{854} \\ 467 \text{ and } 387 \\ \underline{387} \quad \underline{467} \end{array}$

the statements are: 7 and 7 are 14, one to carry; 9 and 6 are 15, one to carry; 4 and 4 are 8. And in $\begin{array}{r} \overline{62892} \\ 4 \text{ times } 6 \text{ are } 24, 4 \text{ to carry; } 8 \text{ times } 6 \text{ are } 48, 1 \text{ to carry; } 2 \text{ times } 6 \text{ are } 12. \end{array}$

Auxiliary Organizations

(a) All teachers of Auxiliary Classes are specially trained in a five weeks' Summer Course. In 1936 a tri-part course was given (i) for teachers having at least an interim Second Class Certificate and three years' successful teaching experience in the Province, who wished to qualify as teachers of training and promotion classes; (ii) for teachers with at least an interim First Class Certificate and three years' successful teaching experience or an ordinary Vocational Certificate who wished to qualify as teachers in senior craft schools; (iii) a general course for teachers who wished to improve their professional standing or to prepare themselves for dealing with problem children in their classes. 86 took the first course, 13 the second, and 35 the third.

(b) Brief courses were given in each of the eight Provincial Normal Schools to acquaint teachers-in-training with methods of dealing with auxiliary type pupils, especially with those in rural schools. The many inquiries received by the Department from recently graduated teachers concerning the educational welfare of exceptional children is evidence of the interest aroused by these Normal School talks.

(c) The monthly or bi-monthly meetings of the eight Auxiliary Class Teachers' Associations throughout the Province have been the means of disseminating new ideas and practices and of affording fresh stimuli to a body of workers whose special duties tend to diminish their normal professional contacts.

(d) The Auxiliary Class Section of the 1936 O.E.A. was well attended. Several Ontario representatives took part in the 1936 Convention of the International Council for Exceptional Children held in Chicago. A large number of auxiliary class teachers in this Province are enrolled as members of the Council and the Journal connected with the organization has a wide circulation in Ontario.

(e) The "Special Class Teachers", a magazine devoted to the interests of special education, and published by the Auxiliary Class Section of the O.E.A., has enjoyed a greatly increased circulation during the past year. The efforts of its progressive management and editorial staff are being loyally supported by the provincial body of auxiliary class teachers with contributions as well as with subscriptions.

(f) A performance test known as the Ontario School Ability Examination was authorized by the Minister for use among deaf children whose native tongue is other than English, or who for any other reason are lacking in language facility. The use of this test has not only greatly facilitated the entrance of suitable candidates to the Ontario School for the Deaf but has provided a means of examining children to whom the Binet-Simon examination could not be satisfactorily administered.

H. E. AMOSS,

Toronto, March 31st, 1937.

Inspector of Auxiliary Classes.

APPENDIX H

REPORT OF THE DIRECTOR OF SCHOOL ATTENDANCE

Just fifty-five years ago the first real attempt was made to improve the attendance in our elementary schools. What a lot of water has passed under the educational bridge since that time! Then the Truancy Act required a minimum attendance of eleven weeks in a term for children between seven and thirteen years of age. The requirements were soon increased until at the present time the attendance standard has reached a very high level.

Elementary Schools

At the end of the 1935-36 school year, there were in Ontario 7,159 elementary schools, of which 6,347 were Public and 812 were Separate.

Secondary Schools

Besides these, there were 225 High Schools and Collegiates, 208 Continuation Schools, and 63 Vocational and Special Industrial schools, making a total for this class of 496. These, along with the elementary schools, made a grand total of 7,655. In May, 1936, pupils were enrolled in these schools as follows:—

Public Schools.....	460,785
Separate Schools.....	101,152
High Schools and Collegiates.....	67,899
Continuation Schools.....	9,464
Vocational and Special Industrial Schools.....	35,915

675,215

The population of Ontario, according to the latest statistics, is 3,596,000. Approximately one-fifth of this population is enrolled in our Elementary Schools. Not only are they enrolled, but they are in attendance, as the following tables of percentages will show:—

Table No. 1

Class of School.....	1932	1933	1934	1934-35	1935-36	Increase in percentage over 1932
City Schools.....	90.88	92.21	92.82	91.70	91.87	.99

Table No. 7—Distribution of Losses.

Days Lost Through		1934-35	1935-36
Illness.....	6,452,406	66.09	62.96
Home Help.....	785,754	8.48	7.67
Parental Neglect.....	523,837	5.48	5.10
Physical Obstacles.....	450,116	2.63	4.39
Truancy.....	24,310	.27	.24
Privation.....	97,081	.98	.95
Irregular Closing.....	713,514	3.44	6.96
Other Reasons.....	1,201,291	12.63	11.73
	10,248,309	100.00	100.00

A comparative analysis of the above table shows improvement over the previous year in several respects. Home Help and Parental Neglect both decreased, apparently on account of greater interest shown by the parents in their children's attendance. An unusually severe winter last year was the cause of the increased number of absentees, but on the other hand, it is gratifying indeed to find that Truancy has been reduced to .24 of one per cent., a tribute possibly to more congenial surroundings and to increased skill on the part of the teachers in making school life interesting. An improvement in financial conditions is shown by the gradual decrease in Privation during the past three years. The increase in Irregular Closing is due principally to the fact that the opening day, January 3rd, fell on Friday and that nearly all the schools did not open till the following Monday.

Besides the various schools provided for the education of the children, there are other means for those who are not fortunate enough to be within easy reach of a school. Up in the scattered regions of the North, school cars are doing good work, while the Correspondence Courses give instruction to many a child who would otherwise be handicapped by the lack of educational opportunities.

In these and other ways, the Department of Education is providing for every boy and girl in the Province an opportunity for preparation for the part he or she is to play in the not far distant future.

R. D. KEEFE

Director of School Attendance.

Toronto, February 15th, 1937.

APPENDIX I

REPORT OF THE ACTING INSPECTOR OF
PUBLIC LIBRARIES

On October 1st, 1936, Mr. F. C. Jennings, the former Inspector of Public Libraries, left this branch to take the position of Chief Librarian of the Ottawa Public Library System. During his term of office as Inspector, Mr. Jennings covered the entire library field of the province by inspecting every free and association library, in many instances, where it was deemed necessary, making several visits. Included in his office duties was the editorship of the *Ontario Library Review*. He was also a special lecturer in the Library School, Ontario College of Education.

With his staff, Mr. Jennings was kind, thoughtful and considerate, and we feel that all who came in contact with him as Inspector will wish him success in his new field of labour.

Summary

The following libraries were added to the list of free public libraries during 1936: Fenelon Falls, Petrolia, and Edinburgh Branch at Ottawa. Fenelon Falls and Petrolia were former association public libraries.

The following association libraries were removed from the list of active libraries: Belle River, Chalk River, Copetown, Elmvale, and Scarborough Bluffs.

The library at Walton was re-organized and added to the list of association libraries.

County Libraries

There is a growing County Library consciousness throughout the province. Several new associations are in the formative stage and others have been organized. The Elgin County Library Association was organized in September 1936, and the Oxford County Library Association on January 2nd, 1937. These, together with the older associations such as Lambton and Middlesex, are taking up the library problem of the county and are performing a library function that could not be done in any other way. These associations deserve every encouragement, and the time seems not far distant when special legislation covering every phase of county library work must be prepared.

The Ontario Library Review

The *Ontario Library Review* has been published regularly and there is a growing list of subscribers. Group subscriptions are available to all free and association public libraries of the province. These provide for a copy to each member of the library board and of the librarian's staff at the yearly rate of one dollar. This amount is deducted from the annual grant. Individual subscriptions are received at a current yearly rate of twenty-five cents.

New Library Buildings

At Port Rowan, Mr. and Mrs. C. S. Killmaster and family generously donated an attractive and substantial building which will be a memorial to the family and a distinct acquisition to the community. The formal opening took place on July 19th, 1936.

The "Log Cabin Library" which is situated at Hyndford, was erected largely with voluntary labour and by local contributions. It is solid, comfortable, and economically built, since nearly all the material for the construction was obtained in the neighbourhood itself. The official opening was on June 3rd, 1936.

Travelling Libraries

A report on the Travelling Libraries for the year 1936 shows that the number of cases sent out was 583, and the number of application forms sent out was 584. The circulation of the books shows the following: Juvenile, 26,047; Classed, 12,051; and Fiction, 18,500; making a total of 57,048 volumes.

The number of cases loaned to Public Libraries was 233; to Schools, 166; to Women's Institutes, 76; and to Farmers' Clubs, Study Clubs, etc., 108. The increase in circulation over 1935 was 15,027 volumes.

A partial Open Shelf Service is being carried on, whereby an individual requiring books on a certain subject may obtain them from the Travelling Library collection for a period of three weeks, the only charge being the return postage. These books are loaned through the agency of the nearest local library. This service has not as yet been fully developed, as the stock of books is limited, and the greater number are out in circulation.

Donations

The Public Libraries Act provides that the books of association public libraries which have been closed revert to the Department of Education. They are distributed at the discretion of the Minister. As far as possible these books are left in the community by donating them to the local public school, but a large number come to the Department, where they are sorted, packed, and donated, on request, to lumber camps, construction camps, small libraries, and other places where use will be made of them. During the year 1,965 volumes were so distributed.

Work of the Public Libraries Branch

The work of the Branch has been carried on by the members of the staff under the direction of the Deputy Minister of Education.

I present herewith a statistical statement of the public libraries of the province.

S. B. HERBERT,
Acting Inspector of Public Libraries.

April 21, 1937

APPENDIX J

REPORT OF THE SUPERINTENDENT OF THE ONTARIO
SCHOOL FOR THE DEAF

I have the honour to submit herewith the Annual Report of the Ontario School for the Deaf for the year ending March 31st, 1937.

Attendance •

The enrolment by months:—

	Boys	Girls	Total
April, 1936.....	158	141	299
May.....	158	141	299
June.....	158	141	299
September.....	146	134	280
October.....	151	136	287
November.....	152	137	289
December.....	152	138	290
January, 1937.....	153	139	292
February.....	150	141	291
March.....	150	141	291

Average attendance for the year—292.

Enrolment by counties and districts:—

Algoma.....	9 pupils	Muskoka.....	3 pupils
Brant.....	5 "	Norfolk.....	2 "
Bruce.....	3 "	Northumberland.....	2 "
Carleton.....	11 "	Nipissing.....	5 "
Cochrane.....	3 "	Ontario.....	4 "
Dufferin.....	2 "	Oxford.....	4 "
Dundas.....	6 "	Parry Sound.....	1 "
Durham.....	2 "	Perth.....	2 "
Elgin.....	1 "	Peterborough.....	2 "
Essex.....	26 "	Peel.....	1 "
Frontenac.....	6 "	Prescott.....	2 "
Grenville.....	1 "	Rainy River.....	4 "
Grey.....	3 "	Renfrew.....	7 "
Haldimand.....	4 "	Simcoe.....	6 "
Halton.....	3 "	Sudbury.....	7 "
Huron.....	2 "	Thunder Bay.....	10 "
Hastings.....	8 "	Timiskaming.....	13 "
Kenora.....	2 "	Victoria.....	1 "
Kent.....	7 "	Waterloo.....	14 "
Lanark.....	4 "	Wellington.....	6 "
Leeds.....	7 "	Welland.....	7 "
Lincoln.....	3 "	Wentworth.....	12 "
Middlesex.....	11 "	York.....	57 "

Enrolment by cities of 20,000 population or over:—(These pupils are also included in the enrolment by counties and districts).

Brantford.....	2 pupils	Ottawa.....	8 pupils
Fort William.....	5 "	Peterborough.....	0 "
Guelph.....	1 "	St. Catharines.....	1 "
Hamilton.....	10 "	Sault Ste. Marie.....	6 "
Kingston.....	5 "	Toronto.....	41 "
Kitchener.....	7 "	Windsor.....	13 "
London.....	7 "		

Fifty-four pupils left during the year, and forty-five pupils were admitted for the first time.

The ages of pupils leaving school were:—

22 years.....	1 pupil	18 years.....	5 pupils
21 ".....	5 pupils	17 ".....	11 "
20 ".....	4 "	16 ".....	8 "
19 ".....	11 "	Under 16 years.....	9 "

Of the nine pupils leaving school before they were sixteen years of age, four are attending public or separate schools, two are living outside the Province of Ontario, and two are ill.

Ages of new pupils on date of admission:—

4 years of age.....	1 pupil	11 years of age.....	3 pupils
5 " " ".....	6 pupils	12 " " ".....	2 "
6 " " ".....	7 "	13 " " ".....	1 "
7 " " ".....	7 "	15 " " ".....	1 "
8 " " ".....	6 "	16 " " ".....	5 "
9 " " ".....	1 "	17 " " ".....	1 "
10 " " ".....	3 "	20 " " ".....	1 "
Total.....45 pupils			

The school is organized in three departments—junior, intermediate, and senior.

Ages of pupils, September 15th, 1936:—

Junior Department		Intermediate Department		Senior Department	
4 years of age.....	1	10 years of age.....	4	11 years of age.....	1
5 " " ".....	8	11 " " ".....	10	12 " " ".....	0
6 " " ".....	16	12 " " ".....	23	13 " " ".....	5
7 " " ".....	15	13 " " ".....	25	14 " " ".....	6
8 " " ".....	26	14 " " ".....	14	15 " " ".....	8
9 " " ".....	30	15 " " ".....	11	16 " " ".....	22
10 " " ".....	23	Total.....87		17 " " ".....	14
11 " " ".....	12			18 " " ".....	8
12 " " ".....	2			19 " " ".....	6
Total.....133				20 " " ".....	2
				21 " " ".....	1
				Total.....73	

Summary for School

4 years of age.....	1	13 years of age.....	30
5 " " ".....	8	14 " " ".....	20
6 " " ".....	16	15 " " ".....	19
7 " " ".....	15	16 " " ".....	22
8 " " ".....	26	17 " " ".....	14
9 " " ".....	30	18 " " ".....	8
10 " " ".....	27	19 " " ".....	6
11 " " ".....	23	20 " " ".....	2
12 " " ".....	25	21 " " ".....	1
Total.....293		Average age.....11.6 years	

The causes of deafness, recorded from the statements of parents or guardians at the time of admission of pupils, but unsupported by medical evidence, were as follows:—

Congenital.....	175	Syphilis.....	2
Whooping Cough.....	12	Falls.....	5
Measles.....	16	Suppurating Ears.....	3
Scarlet Fever.....	16	Osteomyelitis.....	3
Spinal Meningitis.....	16	Rickets.....	1
Infantile Paralysis.....	3	Unknown.....	19
Influenza and Pneumonia.....	29		
Total.....	300		

Ages at which loss of hearing occurred:

Born deaf (congenital)	175	Four years	9
Before one year	55	Five years	5
Between one and two years	32	Six to ten years	8
Three years	12	Over ten years	4
Total	300		

Dr. James Kerr Love, who was associated with the Glasgow Institution for the Deaf and Dumb, now known as the Langside School for the Deaf, for a period of forty years, presented a paper to the Royal Society of Medicine in 1932 on the topic "Toward the Prevention of Deaf Mutism". This paper was published in the Teacher of the Deaf, April, 1932, and in the Volta Review, August, 1932. In this paper Dr. Love states that in 1931 the population of Scotland was about 4,800,000 and that there were 534 deaf pupils in Scottish Schools. He further states, in referring to the cause of deafness, that the ratio in 1931 was: congenital deafness 72.2 and acquired deafness 27.8.

Degree of Deafness

Two hundred and forty-five pupils have had their hearing tested by use of a 1A audiometer. These tests for loss of hearing give the following results, the ear having the greater amount of residual hearing being used for record purposes:

90% to 100% loss of hearing	24 pupils
80% " 89% " " "	48 "
70% " 79% " " "	68 "
60% " 69% " " "	43 "
50% " 59% " " "	26 "
40% " 49% " " "	23 "
30% " 39% " " "	8 "
20% " 29% " " "	3 "
10% " 19% " " "	2 "

Employment of Graduates

In November, 1936, the following questionnaire was sent to pupils who had left school in June, 1935, and in June, 1936, and to seventy pupils who had left in June, 1934, or before that date:

1. What shop work did you learn at the Ontario School for the Deaf?
2. Have you been doing this work since leaving school?
3. Are you working now?
4. Where are you working?
5. How long have you been working?
6. What wages are you paid?
7. Do you use your speech and lip-reading with the people with whom you work?
8. If you are not working, tell what you are doing?

Answers to the questionnaire were received from one hundred and twenty-three former pupils. A consideration of these replies would suggest that:

1. A large proportion of former students are gainfully employed, full time or part time.
2. Those who are employed are earning fair wages.
3. Those who profited most from their training in school are earning the higher wages, in whatever work engaged.

4. A comparatively small percentage are engaged in the work in which they took their vocational training.
5. Those who left school without vocational training are unemployed.
6. The deaf find it difficult to obtain jobs initially, but once employed, retain their positions.

A more complete investigation into the employment of the deaf is very desirable. To be of greater value, data concerning the entire deaf population of the Province are necessary, and such information might be obtained with the assistance of organizations such as the Ontario Association of the Deaf.

Ontario School Ability Examination

Before the application of a pupil for admission to the School is accepted he is given the Ontario School Ability Examination by a qualified examiner. Dr. H. E. Amoss, Inspector of Auxiliary Classes, is the author of this Examination, which was published in 1936. On the title page Dr. Amoss states "This is a performance test prepared more especially for use among children who are deaf, whose native tongue is other than English, and who for other reasons are lacking in language facility."

A statement on the History of Establishment of the Examination includes the following: "The Ontario School Ability Examination was begun through an attempt to discover some means of deciding the eligibility of candidates for admission to the Ontario School for the Deaf." As a final conclusion the author expresses the opinion, "That the Ontario School Ability Examination is set forth as valid in the Province of Ontario and probably valid in other English-speaking areas for the purpose of determining the school ability of deaf children."

During this school year all new pupils have been re-tested after admission and the results indicate that the Examination is very reliable. There is also a close correlation between the mental age as determined by the test and progress in school. As pupils have been subjected to this examination for two years or more, before and since publication, results obtained have been valuable in effecting proper grading and promotions.

Retirement of Miss Deannard

Miss Elizabeth Deannard, who joined the teaching staff in April, 1910, retired on September 1st, 1936. During this long period Miss Deannard gave faithful, whole-hearted, and sacrificial service in the interests of the pupils. Early in her teaching experience her genius for teaching speech and lip-reading was recognized and she entered a wider sphere of usefulness as supervising teacher of the intermediate department.

As teacher in charge of the girls' residence, Miss Deannard had had the responsibility for the physical and moral welfare of the girls and was always very conscientious in discharging her numerous duties.

Closing Exercises

On Friday evening, June 5th, an entertainment by the children was presented on the school lawn. The programme included: a Spanish dance, pyramids and tumbling, club swinging, and a pageant, "The Coming of Spring". At the conclusion of the programme an exhibition of vocational work was on display in the assembly room and class rooms. The following excerpt is taken from the Ontario-Intelligencer: "Over one thousand residents of the City and

district responded enthusiastically to the cordial invitation to be guests at the Closing Exercises at the Ontario School for the Deaf, Friday evening, June 5th, when a programme of entertainment and practical demonstrations engaged the interest of the visitors for three hours. Two hundred children took part in the many engrossing features of the evening's presentation."

"The evening's visitors realized, as many of them had never before realized, the scope of the vocational work of the school. With so many varied branches of training opened to them, students will be fitted to take a useful place in business and industry, and the aim of the school, namely, developing worthy citizens, will have been realized."

Recreation and Physical Education

During the year the boys participated in the following games: softball, rugby, soccer, hockey, volley ball, and track and field events. In these games they competed successfully with teams from the secondary schools of the district. In the junior rugby schedule C.O.S.S.A., for boys under seventeen years, the deaf boys won second place, and our junior hockey team for boys under fifteen years of age won first place in the City Ki. Y. league.

Seniors, intermediates, and juniors competed in inter-mural sports in softball, rugby, soccer, volley ball, and hockey. A winter sports day and an ice carnival were held in February and a field day in June.

The girls' recreations included softball, badminton, club swinging, and skating, as well as various indoor games in the residence. A troop of girl guides consisting of thirty-two senior girls was organized during the year.

Report of the School Physician

During the year ending March 31, 1937, we have had 255 admissions to the School Hospital. Many of these admissions were for short periods of 24 hours or less; for observation, for minor disabilities, earaches, etc.

We have had no epidemic with the exception of influenza. Fortunately this epidemic was not of a severe type.

We have had one case of Still's disease; one case of osteomyelitis; one case of adenitis following measles of last year; two appendectomies; one fracture of ulna and radius; one fracture of the wrist; and one tonsillectomy.

In the outdoor department we had an average of 31 dressings a day. Children are weighed monthly. With a very few exceptions all children have shown a gain in weight.

Our younger children and those underweight are fed morning and afternoon between meals.

Classes under Miss Fitzgerald were given nursing instruction, as emergency work, bedside nursing, etc.

(Signed) R. W. TENNENT,
Physician.

Visit of the Minister of Education

The pupils were much interested in the visit of the Minister of Education to the school on May 12th, 1936.

The following reference was made to the Minister's visit by the Ontario-Intelligencer:

"On Tuesday, May 12th, the Honourable Dr. L. J. Simpson, Ontario Minister of Education, paid his first visit to the Ontario School for the Deaf and was greatly pleased with the work that is being accomplished there."

In speaking to the Ontario-Intelligencer, Dr. Simpson expressed much pleasure with his visit to the School. "I am impressed by the whole school", he said. "The buildings are in a wonderful state of repair and the grounds are beautifully kept."

The distinguished visitor was particularly impressed with the healthy, happy appearance of the children but could not help feeling profoundly touched with the tragedy of their handicap."

Belleville, April 15th, 1937.

W. J. MORRISON,
Superintendent.

APPENDIX K

REPORT OF THE SUPERINTENDENT OF THE ONTARIO
SCHOOL FOR THE BLIND

Aims

"At its best and widest, then, education is the art of employing experience to fashion modes of feeling, thinking, and action that conform to the highest standards of human value; it has no limits within the sphere of man's relationships to his fellows and to his material environment, and it should be subject throughout to the moral law that the opportunity to gain imposes the duty to give."

The phrase, "the education of the blind," implies education of the blind chiefly at the hands of seeing teachers and for the purpose of a seeing world. Between the education of the blind and the seeing, there is indeed no essential difference,—though the methods by which we seek to realize the aims are different. During the last generation, the focal point of educational concern has been the individual child. His right to unfettered development has been loudly proclaimed. Research workers have been investigating individual differences and advising means to enable him to make the best of the gifts with which he has been endowed.

On the contrary, little progress has been made—or even attempted—to find out the manner in which children develop into social beings, and the way the individual can best be trained to serve his fellows.

Just so, in the realm of educational method, great advances have been made in methodology. But little progress has been made in subjecting the entire body of information and technique to the sway of a single directive purpose that shall guide and unify all the activities of the school.

"To know, to desire, and actively pursue the things of greatest worth in the spheres of social and personal values are the marks of a good character, to the making of which all educational effort should be directed."

Enrolment

	Boys	Girls	Total
Enrolment Jan. 1, 1936.....	65	61	126
Admitted Jan. 1, to June, 1936.....	1	2	3
Admitted September, 1936.....	18	10	28
	84	73	157
Left June, 1936.....	6	6	12
	78	67	145
Admitted Sept. to Jan. 1, 1937.....	1	0	1
	79	67	146
Left Sept. to Jan. 1, 1937.....	1	1	2
Enrolment Jan. 1, 1937.....	78	66	144

Of the 144 pupils in residence on January 1, 1937, 101 were from Ontario, 19 from Alberta, 9 from Manitoba, and 15 from Saskatchewan.

New Pupils in Age Groups

Age	No. Pupils	Age	No. Pupils	Age	No. Pupils

7.....	5	12.....	1	17.....	1
8.....	4	13.....	3	18.....	1
9.....	2	14.....	2	19.....	1
10.....	3	15.....	2	20.....	2
					Total..... 32

It is rather significant that we have such a wide spread of ages in our new pupils. There are several causal factors for late entry, such as distance from a Prairie home, accident, re-entry after absence through illness, late onset of optic atrophy, and such like. Perhaps it will be interesting to give some detail of the above age-groups. Of our nine-year group, one was a western boy and the other a lad who had tried to get along in an auxiliary class in the city of Brantford, but failed through lack of necessary sight. In the ten-year group there is one westerner, a little Indian girl, and a very bright lad from the Toronto suburban area; age twelve, one accident case; age thirteen, two re-entries and one case where a good deal of intensive social and hygiene training was needed before the child could function in a school group. In age fourteen, there was one transfer from the School for the Blind in Batavia, N. Y., and one girl whose sight began to fade in Junior IV; age fifteen, one re-entry and one Prairie child; age sixteen, one boy from Cornwall who had been in an auxiliary class for some time, and one Prairie girl who had reached High School before her sight failed. Age seventeen was an Ottawa girl who had reached Junior IV before her sight failed. Age eighteen, an Ottawa boy who had put in two years at High School before optic atrophy forced him out of a school for the seeing; age nineteen, one re-entry; age twenty, one girl who had been two years at High School before her sight failed noticeably, and one boy re-entering for this year only.

Among this group are three pupils, ages sixteen, eighteen, and twenty respectively, who had completed two years or more of High School work, and I had very great doubts that their best interests would be served by coming to us. The sixteen-year-old girl is from Alberta, and the other two are Ontario children. Despite my questioning the wisdom of their coming, they all came, and have done uniformly good work. I asked them to write out a very brief statement of the benefits they felt they had received here, and quotations from two of their estimates follow:—

"During the last few months that I have spent here, I have learned much more than I did during my last year at Collegiate. The subjects are practical and useful. Of course, there is always the problem confronting us whether or not we will be equipped for any definite work when we leave school. On the whole, I think those pupils who have been here several years are just as well educated as any High School student."

"I have been at this school just four months, but during this period I have learned a great deal, not only in my classes but also morally and socially. In my classes, I find it much easier to keep up with the other students. Writing all day in school and then coming home and spending two or three hours doing home-work is very strenuous for anyone; and for a partially sighted person it is practically impossible to keep up. In this school, you must learn to take your own part, to stand up for your rights. This will aid considerably after we leave here. These, I believe, are the most outstanding points of advantage in attending the school, but there are many more."

The third statement is full of praise and appreciation, but makes no special statement that would be of value here.

Graduates and Withdrawals in Age Groups

Age	No. Pupils	Reason for withdrawal
7	1	Died as a result of brain tumour.
8	1	Died as a result of brain tumour.
11	1	To attend Sight-Saving Class.
12	1	To attend Sight-Saving Class.
15	2	One, Sight-Saving Class; the other to work on farm at home.
18	1	Manitoba boy, graduated in our industrial shops; went to work.
19	2	One boy remained at home with a heart condition. One girl, with considerable sight, left to do apprentice work in a beauty parlour.
21	2	One girl, taking further training in languages in Montreal. One boy, left to train for assistant executive post with the Canadian National Institute for the Blind.
22	2	One girl remained at home. One boy, working in shops of Canadian National Institute for the Blind.
24	1	Girl, at home (entered school for first time at age of 20).

The seven- and eight-year-old children who died as a result of brain tumour had both had removal operations before coming to school. The male student in the twenty-one-year-old group who left to train for an assistant executive position with the C. N. I. B., graduated with high standing in both our literary and music departments. Of the twenty-two-year-olds, one girl with entrance standing in literary work and very satisfactory work in household science left to help at home. The twenty-four-year-old girl who entered school at the age of twenty years, had first year High School standing, and did superior work along manual lines. She is hoping for employment as a visiting teacher with the Canadian National Institute for the Blind.

Intelligence Quotients of New Pupils

Of the thirty-one pupils admitted since January 1, 1936, we have not yet tested three re-admissions after illness, six entering High School and senior grades, and five junior pupils because of language difficulties, ill-health, and retardation through lack of social adjustment. The rating of the seventeen tested is as follows:—

50% to 70%.....	3	90% to 110%.....	5
70% to 80%.....	2	110% to 120%.....	1
80% to 90%.....	4	120% to 140%.....	2

The test used is Samuel P. Hayes adaptation of the Terman adaptation of the Binet-Simon Tests for the seeing. I think that the results are generally skewed a bit toward the left. However, for a small, selected group they show something approaching the normal curve. It will be interesting to give the results of a repeat test on these children in a year or two, after they have had the advantage of a larger social environment and a greater variety of contacts.

Non-Educable and More Retarded Children

These two groups of children, both subnormal from varying causes, do not qualify as candidates for our school. Yet both groups should be a matter of concern to the education or welfare authorities of our Province. The deaf-blind child, the very low grade mental defective who cannot attend to his personal hygiene, the child whose mental development is retarded by causes other than inherent defect of mind—all these are cared for in national homes in England. None of these can be cared for satisfactorily in the average home in which they live.

We think the less retarded (dull normal) should remain in our school, and that such differential treatment as they need should be provided by means of special classes or sectional treatment within the class.

It is indeed quite difficult to grade or test some children when they come to us. Frances came last September from a farm where she had no children as companions or neighbours. She had made no social contacts outside the home. She had not learned to obey in the home, nor had she learned satisfactory social behaviour. The problem presented nearly mentally unhinged both the class teacher and the house mother. This year, we shall try to lead her to re-act socially in a manner to satisfy both her classmates and her teachers. I may say that we have already made some progress. The parents are very much pleased with the results attained and have remarked again and again about the improvement noted during the recent holiday week at home.

Epileptic Children

May I quote from "The Education of the Blind" a survey of the situation in England:

"A child with sight suffering from epilepsy of the major form is excluded from school because his illness causes alarm and distress to the other children. It is obvious that a blind child with major epilepsy has to be excluded from a school for the blind for the same reason."

When I took over my duties at the Ontario School for the Blind, we had three students suffering from epilepsy. Last week, I had to exclude a Saskatchewan lad thus afflicted. The other two students are still with us, but will probably have to be excluded before their education is completed. What is one to say to the epileptic child who fervently appeals to remain? The only hope I could suggest was further training at the Canadian National Institute for the Blind, in protected shops.

Academic Work

The chief problem in educating the blind is to bring within the range of touch and earshot the commonplace happenings of daily life. No verbal substitutes will serve this purpose. The child must learn to know persons and things in terms of his own sensory powers, and to meet the situations in which they occur on an independent footing. To illustrate:

Last week we took a parade of classes to the barn "to see" three new baby calves. We were careful to have each child go over the body of a calf to build up a tactual image. Of course, the child is not always to be a player on the stage that the teacher sets for him; he has to be prepared to play a part in shifting scenes and to adapt himself to unforeseen contingencies. To achieve this is the peak of our problem, and we endeavour to do it day by day. Possibly we make our best contribution here in extra-curricular activities, such as dramatics, overnight or week-end hikes, sleeping out, student club groups, Girl Guides, and Boy Scouts.

Our elementary school is organized as follows:—

Grade	No. in Room	Teacher
Kindergarten-Primary.....	17	Miss Jean Babb
Senior First.....	12	Miss Agnes O'Donohue
Second.....	11	
Junior Third.....	16	Miss Anne Hodge, B.A.
Senior Third.....	14	Miss Esther Murray
Junior Fourth.....	21	Miss Isobel Draper
Senior Fourth.....	20	Mr. Alphonsus McNamara, B.A.

Our High School organization is as follows:—

Form	No. in Room	Teacher
Form II.....	17Mr. W. H. Little
Form III.....	16Mr. Ralph Brown

Subjects specially arranged:

Latin.....	Miss Esther Murray
French.....	Miss Agnes O'Donohue
French.....	Miss Anne Hodge
German.....	Miss Anne Hodge
Physical Training, Skating and Swimming.....	Mr. P. King and Miss Laura Behrens
Special Braille.....	Miss Agnes MacGillivray and all Form Teachers

This work was inspected by Dr. H. E. Amoss, whose criticisms were definite and suggestive, and opened up new fields for study and effort.

Manual Departments

Subject	Teacher
Typewriting.....	Miss V. Kellett and Miss M. Hunter
Piano Tuning.....	Mr. J. D. Ansell
Industrial Shop.....	Mr. R. Troughton
Sewing and Cooking.....	Miss L. Behrens
Knitting.....	Miss A. MacGillivray

In our manual departments we train in:

Basketry	Reed Work	Darning
Chair Caning	Willow Furniture Making	Knitting
Pith Seating	Rubber Mats	Piano Tuning
Raffia Work	Cookery	Piano and Organ Repairs
Furniture Repair	Sewing	Typewriting

This list includes all activities carried on elsewhere in the blind world except weaving, boot making, massage, and broom making. I doubt the value of the former two; the latter two we leave to the Canadian National Institute for the Blind.

Our boys' work is made practical, where possible, in such work as building stage equipment for our dramatic productions, repairing and re-caning all school furniture, supplying our own rubber mats, building reed baskets and vases for our own use. Last year we built a complete chesterfield suite for use in our school reception room. In addition, the boys did caning and repairing for outside customers to the value of forty dollars.

The girls in the cooking department serve occasional lunches to guests and staff members. The senior girls do their own darning; make window hangings for their own cookery, sewing, and club rooms; sew sheets, pillow cases, aprons, etc., for use in our hospital; make, in part, their own underwear, blouses, and wash dresses. One of our senior girls was called home for part of the year to take complete charge of a farm house, due to her mother's illness. Once a year,

the girls hold a bazaar when they sell articles made during the year. Last year, they realized \$55.00. This money goes to finance their Club activities. Articles sold included knitted wear,—babies' booties, caps, sweaters,—aprons, laundry bags, children's dresses, and candy. They also served tea, sandwiches, and cookies made in their cooking department.

In addition to giving articles to the bazaar collection, the girls executed private orders. One girl, during the last school year, made and sold the following articles:—

2 pairs bed socks.....	\$1.00	4 sweaters \$4.00.....	\$16.00
1 pair bedroom slippers.....	.50	Lace centre.....	1.00
Baby jacket.....	1.25	Lace for pillow slips.....	1.00
Skirt.....	10.00	Afghan.....	12.00
3 pairs mitts.....	1.50	Beret.....	.50
		Total.....	\$44.75

Library

During the past year, Mr. W. H. Little acted as Librarian. During the year, 1935-36, 84 pupils borrowed books from the school library, reading a total of 779 volumes.

Reading by Classes

Class	1934-35	1935-36
High School Class.....	73 volumes	151 volumes
Entrance Class.....	403 "	141 "
Senior III.....	163 "	179 "
Junior III.....	211 "	151 "
Second Book.....	115 "	154 "
First Book.....	7 "	3 "
Totals.....	972 "	779 "

During the present year we have inaugurated a card system for the books in our Braille library. The cards were prepared in duplicate, one set being kept as a permanent record, the other circulating with the books. There is a card on file for each pupil, and the numbers of the volumes read are placed on these individual cards, giving us a complete, easy reference record of his reading. The envelopes (attached to the books) in which the cards are placed, were made in our Manual Training Department, while the typed cards were prepared in our typewriting classes.

Last October, ten volumes of fiction were donated to our Braille library by Mrs. Radcliffe of this city. These are very acceptable, but there is an urgent need for more material for our senior and junior students.

Besides other Braille magazines mentioned in a previous report, we are now receiving a copy of the Reader's Digest, given us by an anonymous contributor. This is much enjoyed by our seniors and the information is quite invaluable, providing useful material for oral compositions and class essays.

During the year, we purchased one talking book, and in addition, the Brantford Lions Club donated to us two talking books. The Brant Chapter, I. O. D. E., donated \$10.00 worth of talking book records. To that, we have added records to the value of \$30.00 from our concert funds. This medium is a great aid to the enjoyment and knowledge of good literature. It will never replace the Braille book, but it gives the interpretation of a specially selected reader, is more recreational at the close of a day's work, and is invaluable to the blind student whose poor finger sense never allows him to become a really fluent reader.

Music

In our Music Department we aim to give instruction to every child beyond the first year who is desirous of studying music and who shows a capacity for progress. Our Musical Director, Mr. Frederick Lord, informs me that, during his connection with the school, our choral work has never before reached so high a standard. We have given more instruction this year in both individual voice training and choral training. We have increased the number of students doing orchestral work by eight; the number of piano students by twenty-two. We have extended our group teaching of piano from two classes to four classes. Indeed, this particular type of instruction has passed beyond the experimental stage with us. It means that we can serve sixteen pupils in the time formerly devoted from two to four individuals.

Last spring, at the Stratford Festival, one of our senior boys, Leo Carroll, won a silver medal against ten competitors in the open piano class. The following is a list of our candidates who sat for the Toronto Conservatory of Music examinations in June last, with their standings—

Subject	Pupil's name	Standing
History.....	Isabel Thomson.....	Honours
Form.....	Isabel Thomson.....	Honours
	Geraldine McGregor.....	Honours (First Class)
	Doris Wood.....	Honours
Harmony.....	Helen Self.....	Honours
	Geraldine McGregor.....	Honours (First Class)
	Elizabeth Gliddon.....	Honours
	Tina Biluk.....	Honours
	Louise Cowan.....	Pass
Theory—Grade II.....	Geraldine McGregor.....	Honours (First Class)
	Doris Jackson.....	Honours (First Class)
Counterpoint.....	Tina Biluk.....	Honours (First Class)
	Elizabeth Gliddon.....	Honours (First Class)

The following is a statistical summary of the instruction given in the various branches of our music department:—

Piano.....	84	Viola.....	2
Organ.....	4	Wood Instruments.....	8
Violin.....	18	Brass Instruments.....	10
Cello.....	4	Individual Vocal.....	9
Bass Viol.....	2	Musical Theory.....	100

The 100 taking Musical Theory does not represent 100 individual pupils, as many of these pupils are taking several subjects in this department.

I should like to make mention of the gift of an additional \$350.00 from the Brantford Lions Club to purchase orchestral instruments. During the year, the Department sent us two nearly new upright pianos and one nearly new concert grand piano. We are badly in need of additional individual practice rooms. At the present time, we are using academic class-rooms, library rooms, many dormitory bedrooms; in fact, so much of our available space that it is difficult for a student to find a quiet room to write a letter or to listen to the talking book.

Physical Training

The first precept in our Department of Physical Training is that every child should have a gymnasium period every day. With our Primary and First Book pupils, this means a period of socialized games and songs in the gymnasium, with a music teacher at the piano and two class-room teachers in the circle. During the spring and fall seasons, we endeavour to have these games out-of-doors in the sunshine.

In our intermediate and senior classes, the period is varied from training in field sports to a very limited amount of formal gymnasium, hiking, skating, and eurythmic exercises and folk dancing. In our intermediate and senior groups the sexes are separated. Our senior girls are in charge of a lady instructress, and the boys in charge of a male instructor.

Through the courtesy of the Y. M. C. A. and the Y. W. C. A., our seniors are given instruction down town in swimming. They not only rent us facilities for swimming at a nominal fee, but they supply help in the actual instruction at the tank.

Our Physical Training Department keeps monthly records of individual weights, and informs me of any special weight losses that may require the attention of our Medical Department. Considerable emphasis is given to corrective exercise, posture, and general hygiene.

Extra-Curricular Activities

The incidental training and social education our students receive through their extra-curricular activities is invaluable. Through their club activities, dances, skating parties, card parties, socials, hikes, and their concert and dramatic work, they are being unconsciously fitted to take their places in the seeing community in which they will later reside. Every child in the school has some experience in club life. The small folk have their story and social hour and, in a limited way, accept a certain responsibility toward their community. Under the guidance of a staff member, our small girls knitted individual squares for an afghan—a gift to the children in the Preventorium.

Our intermediates have their Scout and Guide Troups. Under the captaincy of Miss Esther Murray, our Girl Guides have become a very interested, interesting, and efficient unit. They take part in all city Guide activities, and are well on the way to becoming useful, fine citizens. Our Boy Scouts are at present interested in learning signalling. Their flags and kerchiefs were made by our Girl Guides in the sewing classes.

In our senior clubs we aim for a wide spread of activities. During the year, each club holds several dances, sometimes inviting outside boys and girls from the city, and at other times inviting the members of the senior clubs only. Arrangements for these dances are left very much to the students themselves, who plan the dance numbers, issue invitations, and prepare their own refreshments. The Boys' Club has been having a series of addresses from business and professional men, prominent in the city, and have arranged this term for a series of talks from C. N. I. B. officials. All-day hikes, week-end hikes, and skating parties have become an accepted part of the club activities. Poise, ease of manner, and ability to meet and converse with strangers naturally and unaffectedly are natural results of these varied activities.

Our students are constantly called on to take part in or do the whole of an evening's entertainment for church groups and other organizations. The following is a list of some of such services we have rendered during the year:

Eight pupils took over the choral work in a dramatic production at Brant Ave. United Church.

One of our teachers and three of our pupils presented a programme for the city Home and School Club at King Edward School.

Our school orchestra played at the Lions Club dinner.

Several of our pupils presented musical numbers at a Fireside Service at Brant Ave. United Church.

A special concert was given for a group of doctors and their wives visiting the school, and musical numbers were also presented for Miss Hampson, of the Wellesley St. School, Toronto, who gave a talk on her work.

A two-hour recital was presented by our pupils at Mt. Vernon.

Musical numbers at church suppers at Brant Ave., and Onondaga United Churches.

A special programme was arranged for a meeting of the Teachers' Institute. Several of our pupils took part in a recital at the local C. N. I. B. meeting.

Our pupils gave the whole programme at one of the regular meetings of the Brantford Music Club,—our school orchestra being featured.

We presented a full evening's concert at St. Andrew's United Church.

Our pupils took a prominent part in the Lions Club annual broadcast for "Christmas Cheer."

This year, in December, at the request of many, we repeated our Christmas play of a year ago, "Why the Chimes Rang," along with a new play, "The Maker of Dreams." We were interested to see with what ease the "Chimes" caste picked up their parts, and even improved upon their production of the year before. Two of the caste of "The Maker of Dreams" were new to this work, but their work was excellent throughout.

The outstanding event of this past year was the production of our operetta, "Tangles," twice in Brantford, and once at the Eaton Auditorium in Toronto. It was an ideal school project, presenting the work of many departments, and representing the major part of our school population, both pupils and staff. Music, choral numbers, and solos were in the hands of the music department. The several intricate and beautiful dances, which made up the greater part of one act, were taught in the gymnasium to the whole class, from which were selected those to take part in the operetta. Costumes were made in the sewing department. Two girls with some sight did most of the purchasing of materials, often selecting the colours themselves. They were excellent buyers, making the rounds of the different stores to be sure they were getting the best value for their money. One of the girls in particular did excellent work in assisting with the intricate and artistic stage settings. The boys also assisted in this work, making many of the stage properties as well as the armour worn by the soldiers.

The operetta was presented in Brantford under the auspices of the Brantford Rotary Club, and in Toronto in conjunction with the Toronto Home and School Clubs, both of which organizations shared in the proceeds. The following are quotations from the Brantford and Toronto Press: "As an exhibition of the divinely creative element in human beings, it is one of the greatest puzzles to folk who can see." "How do these actor folk without vision do a long, intricate comedy-opera with such accuracy of movement and rhythm?" "'Tangles' is something to be remembered. Not a smile in it—and there are scores—and not a laugh in it, but had some deeper and better meaning than the smiles of ordinary entertainment. So much of our laughter is empty headed—and what is worse, empty hearted. But last evening's entertainment over 'Tangles' wasn't like that. We were better men and women for it . . . they sent us laughing into the night with a better understanding of what courage really is . . . and what wise compassion can accomplish when it really tries."

Visit of the Minister of Education

On June 8th, 1936, Dr. L. J. Simpson and his very gracious wife visited our school. The Minister saw some classes at work and inspected the grounds and buildings. We held a school assembly, where some concert numbers were

rendered and an exhibition of folk dancing was given. The Minister spoke to the students, complimenting them on their work and expressing his appreciation of the diversity of expression in their stage performance.

Acknowledgments

We wish to make the following acknowledgments of gifts and services rendered to us during the year:—

To the Junior Fourth pupils of Williamson Road School, Toronto, for money to purchase a trombone and a clarinet for our school orchestra. This money was raised from a candy sale.

To Brant Avenue United Church for various invitations for our pupils to toboggan parties, suppers, and concerts.

To Mr. J. Bolton of Toronto, for a gift of \$5.00 to be used for some deserving pupil.

To St. James Church for entertainments and a social evening for our A. Y. P. A. group.

To St. Andrew's United Church for invitations to parties and concerts at the church.

To Wellington Street Church, invitations to Father and Son Banquet.

To Junior Knights of Columbus Group, for an invitation to dress rehearsal of a musical review.

To Mrs. E. A. Jones for an invitation of a "Sugaring Off" for our Girl Guides.

To St. Basil's Choir group for an invitation to a theatre party for our pupils who were members of their choir.

To Mr. Arthur Axford for entertainment of the boys in his Sunday School class at a picnic.

To Mr. G. A. P. Arnold for his very valuable assistance in training our dramatic group.

To Miss A. Kellett for her work in creating stage settings for our plays.

To the Brantford Lions Club for a gift of \$350.00 for orchestra needs, and two talking books.

To Mr. E. Moule for several invitations to matinees at the Capitol Theatre.

Alumni Meeting

At the close of school in June, the alumni and alumnae of the school met one hundred and fifty strong. The meeting lasted four days,—two days to come and go, and two full-day sessions. They greatly enjoyed recreating old scenes and experiences. Addresses were given by the President, Dr. S. C. Swift, Alumnus W. G. Raymond, Vice-President, Kathryn Sells, Principal Vallentyne, and others. Subjects of cultural and vocational interest were discussed in general meetings. All details of arrangements were capably carried out by the secretary, ex-teacher W. B. Donkin, assisted by Mr. R. Troughton and our bursar, Mr. G. H. Ryerson.

Canadian National Institute for the Blind

I wish to draw to the attention of your Department the extent to which the Canadian National Institute for the Blind complements and supplements our work.

Their field workers get in touch with all our students in their pre-school period. In not a few cases, they send a field worker to the home to help the mother prepare her child that he may be ready to take his place in a school. Again, they are constantly serving in the making of ophthalmological diagnoses,

and in supplying glasses where such are recommended. They support financially, in whole or in part, twelve of our present pupils. Finally, and most important, we look to them to place all our graduates in gainful employment, or if need be, give further vocational training. That they have been able to accomplish this for nearly all in these last two difficult years is the greatest tribute I can pay to Capt. E. A. Baker and his splendid executive.

Reports

I herewith submit reports from Dr. J. R. Will, our dentist, Dr. Norman Bragg, our ophthalmologist, and Dr. Marquis, our medical officer,—also the financial statement for the year, April 1, 1935 to April 1, 1936:—

Report of Dentist

MR. H. VALLANTYNE, *Principal*,
Ontario School for the Blind.

Dear Sir:—

I have pleasure in presenting my report for the term 1936-7.

All the pupils have had their teeth examined and the work required has been finished.

One hundred and ninety-seven fillings have been inserted, twenty-five permanent and twenty-eight deciduous teeth extracted.

On the whole the pupils attend to their teeth very well.

I think you will be interested to know that fifty pupils required no fillings and thirty-eight only one. To me this is most gratifying for I attribute it largely to the good care taken of them daily. Of course a large proportion of the work is required by those attending for the first time.

I must mention, as I have so often, that the pupils, without a single exception, have given me wonderful co-operation in this work, which at times must be trying for them.

Yours sincerely,

J. R. WILL.

Report of Ophthalmologist

MR. H. J. VALLENTYNE, *Supt.*,
Ontario School for the Blind,
Brantford, Ont.

Dear Sir:—

I have the honour to present the report of the eye examination of the new pupils entering the Ontario School for the Blind for the year 1936-7.

This class numbers 31 pupils, 20 of whom are boys, and 11 girls.

In addition a complete ocular survey was made of every pupil in the school, some 147 in all. The results of the examination are as follows:—

New Pupils

Condition of Sight	Male	Female	Total
1. Limited vision in both eyes.....	12	4	16
2. Limited vision in one eye.....	2	0	2
3. Quantitative light perception in both eyes.....	2	4	6
4. Quantitative light perception in one eye, none in other..	2	1	3
5. Without light perception in either eye.....	2	2	4
	20	11	31

From a study of the above chart, and through comparison with those of former years, we find very little change in the degree of sight shown in this year's class. Compared on a percentage basis, very definite similar findings are noted, except in group 5, which in this year's class shows a much lower percentage than usual. The fact that fewer pupils coming to the School are totally blind is very gratifying, and might be indicative of the advance being made throughout the province in the prevention of blindness.

Diseases Causing Blindness

	Male	Female	Total
1. Ophthalmia Neonatorum and Keratitis.....	4	6	10
2. Iritis, Uvetis and Sympathetic Ophthalmia.....	2	0	2
3. Congenital Cataract.....	4	2	6
4. Fundus lesions, Retino-Choroiditis.....	4	2	6
5. Optic Atrophy.....	2	1	3
6. Myopia.....	1	0	1
7. Congenital Glaucoma and Buphthalmus.....	1	0	1
8. Anirida and Amblyopia.....	2	0	2
	20	11	31

On consideration of aetiological factors producing blindness, we see from the above chart that, while there are quite a number of diseases actually causing blindness, by far the most important classifications fall into three groups,—namely, Keratitis, Congenital Cataract, and Fundus diseases,—especially Retino-Choroiditis. These three are responsible for the visual impairment of 22 pupils of this year's class, as against 9 from all other causes.

Taken separately, we find that there are ten cases resulting from Keratitis, a number of which are birth infections. This is always an unfortunate class, when one considers that many of these cases are preventable. As to the groups including Congenital Cataract and Fundus lesions, we note that in the main they are directly hereditary, and often there is an associated blindness in other members of the family. This type of disease, we hope, may be indirectly eliminated with the advancement of social legislation in future years.

Another pleasing feature noted is the smaller number of cases of Sympathetic Ophthalmia than is usual.

A very thorough ocular examination was conducted, as well, on every pupil in the school, which has proved most gratifying because of the fact that we were able to detect and correct a number of incipient conditions which had recently developed. Then too, we were able by our refractive efforts to improve materially the vision of a considerable group of pupils.

And lastly, we found that, in the case of many others, their sight had improved markedly as a result of the treatment and advice given in former examinations.

All of which is respectfully submitted.

NORMAN BRAGG, M.D.

Report of Medical Officer

MR. H. J. VALLENTYNE, *Supt.*,
 Ontario School for the Blind,
 Brantford, Ont.

Dear Sir:—

I herewith submit my report on the health of students and staff of the Ontario School for the Blind from January 1, 1936 to January 1, 1937:—

Total number of infectious diseases.....	80
(a) Mumps.....	37
(b) Measles.....	32
(c) Whooping-cough.....	6
(d) Scarlet fever.....	5
Toxoid reaction.....	8
Brain tumour.....	2
Pneumonia.....	3
Enucleation of eye.....	2
Colds.....	27
Influenza.....	22
Sore throat.....	10
Croup.....	1
Discharging ear.....	4
Burns.....	1
Infection and boils.....	6
Cervical adenitis.....	7
Rest following epileptic seizures.....	4
Observation of diabetic pupil.....	1
Sprains (ankle and back).....	3
Miscellaneous cases.....	36
Total number of patients.....	217
Total number hospital days.....	1,989
Number of deaths (brain tumour).....	2
Patients sent to Brantford General Hospital.....	4
Patients sent to Isolation Ward—General Hospital.....	5

Of the two deaths listed above, only one, that of June Rawn, should be recorded in this report,—strictly speaking. June was seven years old and lost her sight as the result of brain tumour, and it was a recurrence of this trouble which caused her death. Billy Nebbitt, a six-year-old boy, became ill early in December, 1936, and after observation in our school hospital was sent to the Brantford General Hospital. His parents, informed of the lad's illness, against my own advice and that of the hospital authorities, took the boy home to Toronto. Two days later he was entered at the Hospital for Sick Children, Toronto and the report from there was that he died fifteen minutes after admission. The parents did not wish to have an autopsy performed, and in the absence of more definite information, cause of death was given as brain tumour.

I should like to call your attention in the chart above to the cases of infectious diseases. Five scarlet fever cases were immediately removed to the isolation ward of the Brantford General Hospital, and the rest of the school placed under quarantine for the prescribed period. After release from the Isolation Ward, these patients were quarantined in our own hospital for a further period of ten days.

The cases of mumps, measles, and whooping-cough were cared for in our own hospital, under far from ideal conditions. With only one small permanent ward for boys and one for girls, and with these several infectious diseases occurring simultaneously, our resources and ingenuity were taxed to the utmost. After the sick period was past and the patients were merely under quarantine, they were still confined to these rooms as we had no extra room accommodation for them.

During the past year, every child in the school was given toxoid injections against diphtheria and it is gratifying to note that there were reactions in only eight cases out of about 150 receiving the treatment.

There were two cases of enucleation of eye,—both small boys. In one case, an operation was deemed advisable, as infection from the diseased eye was affecting the lad's general health. Very beneficial results have been obtained from this operation. The other was an emergency case. The boy struck his eye against the corner of a desk, rupturing it. He was rushed to the Brantford General Hospital for immediate attention. Our eye specialist, Dr. Bragg, performed both of these operations. These two cases, together with the two cases of brain tumour, make up the total four cases listed in the above chart as sent to the Brantford General Hospital.

We have at present in the school three pupils subject to epileptic seizures. At least one of these cases gives me grave concern. The seizures in this instance are of such a serious nature as to make it advisable to discontinue this boy as a pupil here. He is quite liable to do himself or any one of a number of smaller pupils serious injury. (Note: This pupil has since been returned home.)

Our past year's experience brings once more to our attention the very inadequate hospital facilities in our school. Our infirmary is situated at one end of the third floor of the main building. There are two boys' wards, one girls' ward, staff room, nurse's bed and sitting rooms, bathroom and dispensary, with a main hallway. This hallway must be used as a hospital ward in an emergency. Most of the rooms are poorly ventilated and lighted. We have no solarium or even a sunny room for the accommodation of patients in the hospital for long periods, such as those quarantined after infectious diseases.

To remedy these conditions, a separate hospital cottage with adequate bed accommodation, separate isolation wards, solarium, dispensary, nurses' quarters, would be ideal from the medical standpoint. Failing this, the removal of the hospital to sunny the side of the second or first floor of the main building, with careful consideration given to remedy present unfavourable conditions, would help materially in caring for the health of our students. These children need more than average constant, sympathetic, and intelligent care. The fact that we have a trained graduate nurse on constant duty has saved us inevitable worry in difficult situations.

J. A. MARQUIS,
Physician.

Appreciation

Finally, may I express my appreciation of the untiring efforts on behalf of the teaching staff to serve the blind child. They have at all times extended to me an appreciated loyalty. The house staff have shown a spirit toward the children akin to maternal care, and have been assiduous in the discharge of their duties.

I have the honour to be, Sir,

Your obedient servant,

H. J. VALLENTYNE,
Superintendent.

Financial Statement

Expended	Expenditure for March 30, 1936	Previously Expended	Expenditures to date 13 months	Casual Revenue

Certified Correct,

G. H. RYERSON,

Bursar.

APPENDIX L

REPORT OF THE PROVINCIAL SUPERVISOR OF MUSIC

A detailed report of the Music Department up to June, 1936, is contained in the previous Report of the Minister of Education. This report will cover the balance of the year 1936.

Since September, 1935, I have visited all the Public and Separate School Inspectors in their fields and have found everywhere a growing interest in Music and a desire to have the children exposed to its influence. Supervised music is spreading rapidly as is shown in the attached table. I wish to express my appreciation of the whole-hearted support of the Inspectors and the co-operation of such organizations as the Women's Institutes and the Home and School Associations. In visiting the various Inspectorates I have had the opportunity of addressing 34 Teachers' meetings, 28 Trustees' meetings, 13 Service Clubs, 4 School Assemblies, 4 School Fairs, 9 School Concerts, and have adjudicated at 8 Music Competitions.

Teacher Training—The Summer Sessions in Music at Toronto and London were largely attended, total enrolment being as follows:

1936—Toronto, 362; London, 191. Total, 553.

1935—Toronto, 264; London, 145. Total, 409.

The Course was extended to three years, and an Instrumental Course added in Toronto.

Music Festivals—Musical Festivals, both competitive and non-competitive, are spreading throughout the Province. To my knowledge, 9 new Festivals are planned for the Spring of 1937, bringing the total in Ontario to approximately 40.

Secondary Schools—There is a growing desire to include Music in the secondary schools. As soon as changes in the curriculum provide adequate time for Music, a large number of schools will introduce the subject. The number of secondary schools qualifying for special Music grants increased from 17 to 24, and many others are teaching Music but not qualifying for grants. A large number of schools have choruses and orchestras as extra-curricular activities, and great credit is due the teachers who freely give their time and talent to these. There is evidence that an increasing number of students are taking advantage of the Music options in Middle and Upper School.

The following statistical information is presented:

THE CONTINUATION SCHOOLS

TABLE 32—CLASSIFICATION OF PUPILS BY SUBJECTS OF STUDY

(1. Obligatory Subjects. 2. Optional Subjects)

Lower School

(1)

English Composition... 5,275	British History.....2,959	Algebra.....3,129
English Literature.... 5,278	Physiography.....2,478	Geometry.....2,501

(2)

Arithmetic.....2,622	Agriculture and Horti- culture—I.....1,319	Special French..... 4
English Grammar.....2,996	Agriculture and Horti- culture—II..... 518	Manual Training..... 8
Art.....2,397	Latin.....4,372	Household Science..... 10
Geography.....2,571	French.....4,837	Vocal Music..... 330
Botany.....2,173		Civics..... 64
Zoology.....1,934		

Middle School

(1)

English Composition.....2,846	English Literature.....2,812
-------------------------------	------------------------------

(2)

(a) Algebra.....1,632	(b) Latin.....2,148
Geometry.....1,806	French.....2,440
Physics.....1,584	Special French..... 1
Chemistry.....1,478	
Agriculture and Horticulture—I... 180	(c) Art..... 1
Agriculture and Horticulture—II... 278	Vocal Music..... 50
Canadian History.....1,682	Bookkeeping and Penmanship..... 4
Ancient History.....1,913	Stenography and Typing..... 7

Upper School

(2)

English Composition... 428	Trigonometry.....261	Botany.....121
English Literature.....425	Modern World History...270	Zoology.....116
Algebra.....227	Physics..... 78	Latin.....181
Geometry.....182	Chemistry..... 73	French.....233

Commercial Course

(1)

Literature (including Oral Reading)....135	Commercial Geography..... 72
Composition (including English Gram- mar)..... 80	Arithmetic (including Rapid Calculation) 124
Composition (including Business Corres- pondence)..... 69	Penmanship and Spelling.....140
Canadian History and Civics..... 71	Bookkeeping (including Business Forms). 96
British History..... 75	Office Practice (including Business Law) . 46
	Typewriting.....142
	Physiography..... 23

(2)

Shorthand.....139	French..... 30
-------------------	----------------

A Commercial Course Class was enrolled in the following Schools: Long Branch, Pelham, Preston.
